Biology for AP® courses covers the scope and sequence requirements of a typical two-semester Advanced Placement® biology course. The text provides comprehensive coverage of foundational research and core biology concepts through an evolutionary lens. Biology for AP® Courses was designed to meet and exceed the requirements of the College Board's AP® Biology framework while allowing significant flexibility for instructors. Each section of the book includes an introduction based on the AP® curriculum and includes rich features that engage students in scientific practice and AP® test preparation; it also highlights careers and research opportunities in biological sciences.

"The Student Handbook is designed to provide students with ready access to information, with problem-solving techniques and study skill guides that enable them to utilize the information in the most efficient manner."--Amazon.com.

Designed to help Advanced Placement students succeed and achieve a '5' on the AP Exam AP Achiever for Chemistry provides: An introduction to the Chemistry Advanced Placement Course and Exam, including tips on essay writing for the free-response portion of the Exam. Concepts, skills, and summaries that reinforce key material. Each chapter also includes "Take Note" sections to guide students through the most important information most likely featured on the AP Exam, as well as practice multiple-choice and essay questions with explanations. Two complete practice exams parallel the AP Chemistry Exam in terms of question type, and number of questions. Each practice exam is also similar to the AP Exam with regard to content, style, and format, and it includes answers and thorough explanations for your students. AP Achiever for Chemistry may be used independently or in conjunction with any Chemistry text. For the most benefit use in conjunction with McGraw-Hill's leading text, Chemistry, 9th Edition, by Chang.

This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Ability grouping. Leveling systems. Streaming. This is the modern way of talking about tracking -- the traditional practice of sorting and selecting students based on test scores and other criteria, and then steering these groups into "the most appropriate" course of study. In 1987, New York's suburban Rockville Centre School District faced the fact that its longstanding tracking system was resulting in unequal educational opportunities and allowing racial and socioeconomic stratification of its student population. School leaders embarked on an ambitious program of reform: reexamining beliefs about intelligence, ability, and instruction, and offering all students the opportunity to study a rigorous curriculum in heterogeneous classrooms. In this book, authors Carol Corbett Burris and Delia T. Garrity, veterans of the Rockville Centre School District, offer an experience-based and research-supported argument that detracking--implemented with planning, patience, and persistence--can do in every school district what it did in theirs: raise achievement across the board and dramatically narrow the achievement gap. Their main goal is a practical one: to provide educational leaders with proven strategies for launching, sustaining, and monitoring a successful detracking reform. Here, you'll read * Why detracking is necessary, the benefits it brings, and how to build support among teachers and parents * How to revise curriculum to "level-up" instruction * How to establish a multiyear, personalized professional development program to help teachers address new instructional needs * How to best support effective teaching and learning in a heterogeneous classroom Detracking for Excellence and Equity outlines a comprehensive approach built on self-reflection, direct action, vigilant supervision, and a set of very clear beliefs: that schools and opportunity matter; that acceleration and enrichment will improve all students' achievement; and that all students deserve access to the best curriculum.
