Mitsubishi's 4G63t engine is among the most powerful engines ever in the sport-compact world. It's not uncommon to find one of these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts, who know and respect this engine's immense performance potential at the track or on the street. Up until now, in-depth performance information on the 4G63t has been hard to find. For this book, author Robert Bowen went straight to the source, Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers every system and component of the engine, including the turbocharger system and engine management. More than just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path.

Despite the precipitous rise of East Asia as a center of architectural production since the Second World War, informed studies remain lacking. The lacuna is particularly conspicuous in terms of regional, cross-national studies, documenting the close ties and parallels between China, Taiwan, Japan and Korea during this period. Examining colonized cities in East Asia, this book brings together a range of different perspectives across both space and time. European, Chinese, Taiwanese, Korean and Japanese discourses are examined, with a range of complementary and conflicting views on the design of urban and architectural forms; the political, institutional, religious and economical contexts of urban planning; the role played by various media; and the influence of various geographical, social and anthropological research methods. The diversity and plurality of these perspectives in this book provides an entwined architectural, urban and social history of East Asia, which offers insights into the cultural systems and the historical and spatial meanings of these colonized cities. It concludes that the difficulties in the historical study of East Asia's colonial cities do not so much indicate cultural difference as the potentiality for multiple readings of the past toward the future.
