This book offers a comprehensive look at an industry that plays a growing role in motor vehicle production in the United States.

This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".

Come along on Mustang's wild ride to automotive success. In the early 1960s, Lee Iacocca - then director of the Ford division at Ford Motor Company - convinced Henry Ford II to produce a sporty four-seat car aimed at the emerging youth market. That car, essentially a reconfigured and re-skinned Falcon economy car, became the Ford Mustang, and it changed the automotive world like no other car before or since. In Ford Mustang: America's Original Pony Car, acclaimed Mustang writer Donald Farr celebrates this unbroken lineage of muscle. He chronicles the car's phenomenal first-year sales, the new pony car category it pioneered, and subsequent models that include the Mustang GT, Shelby GT350, Shelby GT500, Super Cobra Jet, Boss 302, and Boss 429 - all part of a line of American performance cars that continues to this day. Created in cooperation with Ford Motor Company and featuring some 400 photos from its historic and media archives, Ford Mustang is a must on the bookshelf of any muscle car or Ford aficionado.
