The majority of professional practices are not very good at marketing their services. There are usually two main problems. First, they do not use enough marketing channels, i.e. methods of reaching new customers. Second, they do not always use language that relates to their Clients. It can often be more technical and less straightforward.

Successful natural resource management is much more than good science; it requires working with landowners, meeting deadlines, securing funding, supervising staff, and cooperating with politicians. The ability to work effectively with people is as important for the conservation professional as it is for the police officer, the school teacher, or the lawyer. Yet skills for managing human interactions are rarely taught in academic science programs, leaving many conservation professionals woefully unprepared for the daily realities of their jobs. Written in an entertaining, easy-to-read style, The Conservation Professional ' s Guide to Working with People fills a gap in conservation education by offering a practical, how-to guide for working effectively with colleagues, funders, supervisors, and the public. The book explores how natural resource professionals can develop skills and increase their effectiveness using strategies and techniques grounded in social psychology, negotiation, influence, conflict resolution, time management, and a wide range of other fields. Examples from history and current events, as well as real-life scenarios that resource professionals are likely to face, provide context and demonstrate how to apply the skills described. The Conservation Professional ' s Guide to Working with People should be on the bookshelf of any environmental professional who wants to be more effective while at the same time reducing job-related stress and improving overall quality of life. Those who are already good at working with people will learn new tips, while those who are petrified by the thought of conducting public meetings, requesting funding, or working with constituents will find helpful, commonsense advice about how to get started and gain confidence.

In Problem Solving, Decision Making, and Professional Judgment, Paul Brest and Linda Hamilton Krieger have written a systematic guide to creative problem solving that prepares students to exercise effective judgment and decision making skills in the complex social environments in which they will work. The book represents a major milestone in the education of lawyers and policymakers. Developed by two leaders in the field, this first book of its type includes material drawn from statistics, decision science, social and cognitive psychology, the "judgment and decision making" (JDM) literature, and behavioral economics. It combines quantitative approaches to empirical analysis and decision making (statistics and decision science) with the psychological literature illustrating the systematic errors of the intuitive decision maker. The book can stand alone as a text or serve as a supplement to a core law or public policy curriculum. Problem Solving, Decision Making, and Professional Judgment: A Guide for Lawyers and Policymakers prepares students and professionals to be creative problem solvers, wise counselors, and effective decision makers. The authors' ultimate goals are to help readers "get it right" in their roles as professionals and citizens, and to arm them against common sources of judgment error.
