Aviation Logistics looks at the function of the air cargo business and its role in global supply chains and

Online Library Air Transportation 16th Edition

logistics. As global economies are constantly evolving, the supply chain business with its transport partners must be proactive for the future. Technology and its resulting efficiency and transparency are therefore a central part of this book. Aviation Logistics examines how carriers are coming up with new methods and technologies to improve ground handling and road transport, traceability systems and barcoding, security and screening, and safe delivery of perishable items (such as in the pharmaceutical and medical sectors). Endorsed by The International Air Cargo Association (TIACA), Aviation Logistics is supplemented with case studies and contributions from a team of experts including Oliver Evans and Stan Wraight, both industry

The Second Edition of this renowned treasure trove of information about the most important laws and treaties enacted by the U.S. Congress now deepens its historical coverage and examines an entire decade of new legislation. Landmark Legislation 1774-2012 includes additional acts and treaties chosen for their historical significance or their precedential importance for later areas of major federal legislative activity in the over 200 years since the convocation of the Continental Congress. Brand new chapters expand coverage to include the last five numbered Congresses (10 years of activity from 2003-2012), which has seen

landmark legislation in the areas of health insurance and health care reform; financial regulatory reform; fiscal stimulus and the Temporary Asset Relief Program; federal support for stem cell research; reform of federal financial support for public schools and higher education; and much more. Features & Benefits: Each chapter covers one of the numbered Congresses with a historical essay, followed by the major acts of that Congress arranged in chronological order of passage – with each act summarized. A Finder 's Guide summarizes all of the acts and treaties into approximately 40 separate topical policy areas. The work 's extensive bibliography has been expanded and updated. This one-volume resource is a must-have for

any public or academic library, especially those with strong American history or political science collections.

Engaging the Next Generation of Aviation Professionals is an edited volume that brings together a diverse set of academic and professional perspectives within the three themes of attracting, educating, and retaining the next generation of aviation professionals (NGAP). This compilation is the first academic work specifically targeting this critical issue. The book presents a rich variety of perspectives, academic philosophies, and real-world examples. Submissions include brief case studies, longer scholarly works from respected academics, and professional reflections from individuals

who have made important contributions to their field. The book includes academic chapters that explore the topic from a more theoretical standpoint yet are accessible and understandable to a professional audience. These are complemented by both broad and specific practice examples that describe initiatives and applications occurring in the industry around the three themes. All submissions include descriptive insights, experiences, and first-hand accounts of accomplishments, intended to support the work of other professionals managing NGAP issues. This work will be valuable to anyone involved in attracting, educating, or retaining NGAP, including academics, operators, national and international regulators, and outreach

This book presents a number of guidelines that are particularly useful in the context of decisions related to system-approach-based modern traffic engineering for the development of transport networks. Including practical examples and describing decision-making support systems it provides valuable insights for those seeking solutions to contemporary transport system problems on a daily basis, such as professional working for local authorities involved in planning urban and regional traffic development strategies as well as representatives of business and industry directly involved in implementing traffic engineering solutions.

The guidelines provided enable readers to address problems in a timely manner and simplify the choice of appropriate strategies (including those connected with the relation between pedestrians and vehicle traffic flows, IT development in freight transport, safety issues related to accidents in road tunnels, but also open areas, like roundabouts and crossings). Furthermore, since the book also examines new theoretical-model approaches (including the model of arrival time distribution forming in a dense vehicle flow, the methodological basis of modelling and optimization of transport processes in the interaction of railways and maritime transport, traffic flow surveys and measurements, transport behaviour patterns, human

factors in traffic engineering, and road condition modelling), it also appeals to researchers and scientists studying these problems. This book features selected papers submitted to and presented at the 16th Scientific and Technical Conference Transport Systems Theory and Practice organized by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology. The conference was held on 16 – 18 September 2019 in Katowice (Poland), more details at www.TSTP.polsl.pl.

In the current educational environment, there has been a shift towards online learning as a replacement for the

traditional in-person classroom experience. With this new environment comes new technologies, benefits, and challenges for providing courses to students through an entirely digital environment. With this shift comes the necessary research on how to utilize these online courses and how to develop effective online educational materials that fit student needs and encourage student learning, motivation, and success. The optimization of these online tools requires a deeper look into curriculum, instructional design, teaching techniques, and new models for student assessment and evaluation. Information on how to create valuable online course content, engaging lesson plans for the digital space, and meaningful student activities online
