A knowledge of the Business Architecture is a prerequisite for architecture work in any other domain (Data, Application, Technology), and is therefore the first architecture activity that needs to be undertaken, if not catered for already in other organizational processes (enterprise planning, strategic business planning, business process re ...

Phase B: Business Architecture - Open Group

The southern tip of Manhattan and its harbor helped spur the development of the modern city. The new architecture of the era did its best to rival Europe's by displaying decorative classical architectural details and elaborate sculptures — such as on the Custom House of 1899 (now the National Museum of the American Indian).

The Architectural Evolution of New York City

La Vie Development Services, Inc. is a Certified MWBE for New York State, Nassau and Suffolk Counties. This paper is designed to provide a real-life application of a project management maturity model to the New York Times Company. Research includes data gathered for the baseline project management maturity assessment conducted in 2001 and a reassessment conducted in 2002. This interactive presentation will solicit feedback and response from attendees with similar situations.

This book presents the concept of business architecture and optimizing processes as a corporate system based on multiple corporate case studies, including Sony, NTT-DATA, NTT-DoCoMo, Toyota, Honda, Omron, Takara, Recruit, First Retailing, Panasonic and Canon.

This book presents the concept of business architecture and optimizing processes as a corporate system based on multiple corporate case studies, including Sony, NTT-DATA, NTT-DoCoMo, Toyota, Honda, Omron, Takara, Recruit, First Retailing, Panasonic and Canon.

From the lens of holistic systems theory, this book discusses strategic management adapted to evolving convergence in an era of advanced ICT from the viewpoint of the major management elements of strategy, organizations, technologies, operations and leadership. To discuss corporate change in response to such advanced technology in a theoretical and empirical manner, it is necessary not only to analyze and consider individual management elements such as strategy, organizations, technologies, operations and leadership in a piece-meal manner but also to determine the research issues from a framework based on a holistic management perspective through systems theory including interaction between and among the respective individual management elements (from micro to macro elements). Applying both innovation theory and capabilities theory, this book presents a new framework and knowledge for holistic strategic management from a systems theory lens that focuses on the issue of how major corporations can develop capabilities to achieve strategic innovation in response to the impacts of advanced ICT on corporate management.

?The original point that differentiates this text from otherwise similar texts is that it looks at the building of smart cities from the viewpoint of an interchange of knowledge among companies in different industries, or “Ba” as shared context in motion, and emphasizes that the resulting value becomes a source of new corporate competitive advantage. In recent years numerous publications have appeared that analyze smart cities from various perspectives including urban planning and administration, network theory, and innovation. However, few are academic texts that approach the subject from the viewpoint of corporate competitive advantage against a theoretical background in management studies, as this one does. This book is the first full-scale academic work to analyze smart cities from the viewpoint of corporate competitive advantage. Research into corporate competitive advantage includes the positioning and the resource-based views, with the former focusing on companies’ external environment and the latter on their internal resources. Although these theories’ foci of attention necessarily differ, they both developed as tools for analyzing companies’ relative merits and their chances of succeeding in the marketplace, and they take the common premise that competitive advantage is built through competition among companies. In contrast, this book sees corporate competitive advantage as arising not through competition but through “co-creation” among companies. It differs in its approach from existing theories in thinking that emphasizing co-creation over competition enables an analysis that better describes actual conditions when considering smart cities and corporate competitive advantage. Put another way, when new values arise from attempts to exchange and fuse knowledge, expertise, and other factors at the “ba” where companies from different industries collaborate, these values are surely brought about through co-creation among companies. Another point regarding this book’s original perspective on competitive advantage is its emphasis on the relationship between the creation of social value and competitive advantage. The question of the extent to which socially useful values can be created in the markets of the 21st century is closely linked to corporate competitive advantage. The issues of building smart cities and corporate competitive advantage are themes that this perspective can firmly grasp. This book intends to take up three different projects from among the smart-city building developments taking shape in Japan, and undertake case studies based on the theoretical framework outlined above. The central themes will analyze the mechanism of co-creation among companies and the relationship of created value to competitive advantage. This analysis aims to demonstrate one model relating to corporate competitive advantage in the 21st century.

Proposes that video communications tools are a form of infrastructure that enhance the creation of new knowledge which transcends space and time in business activities. Illustrates that the dynamic relationship of four elements of ICT capability promote the formation of business networks and the development of knowledge communities.

Since the 1990s, Japanese firms have sought to expand their capacity for innovation by incorporating Western management practices into their organizational culture. This combination of Japanese and Western management practices has been highly successful — Japanese firms are presently at the forefront of technological and service innovation in areas such as digital consumer electronics, mobile phone services, and the games industry. Much can be learned from the success of Japanese companies in these areas. This book presents an analysis of the business model unique to Japanese firms, emphasizing four special features: the vertical value chain model, cross-industry collaboration, dynamic knowledge integration, and strategic innovation capability. Drawing upon in-depth case studies, this book presents a new theory of knowledge integration, and places special emphasis on inter- and intra-organizational collaboration as a source of strategic innovation. It is a good reference source for academics, graduate students and professionals in the field of innovation management.

The integration of recent technological advances into modern business processes has allowed for greater efficiency and productivity. However, while such improvements are immensely beneficial, the modeling and coordination of these activities offers a unique set of challenges that must be addressed. *Business Architectures for Risk Assessment and Strategic Planning: Emerging Research and Opportunities* is a pivotal reference source for the latest research findings on the utilization of business models and value propositions in modern enterprises. Featuring extensive coverage on relevant areas such as management information systems, business planning, and value analysis, this publication is an ideal resource for information system practitioners, universities and colleges, business managers, and advanced-level students seeking the latest research on achievements in this field.

For trainers free additional material of this book is available. This can be found under the "Training Material" tab. Log in with your trainer account to access the material. TOGAF is a framework - a detailed method and a set of supporting tools - for developing an enterprise architecture, developed by members of The Open Group Architecture Forum. TOGAF Version 9.1 is a maintenance update to TOGAF 9, addressing comments raised since the introduction of TOGAF 9 in 2009. It retains the major features and structure of TOGAF 9, thereby preserving existing investment in TOGAF, and adds further detail and clarification to what is already proven. It may be used freely by any organization wishing to develop an enterprise architecture for use within that organization (subject to the Conditions of Use). This Book is divided into seven parts: Part I - Introduction This part provides a high-level introduction to the key concepts of enterprise architecture and in particular the TOGAF approach. It contains the definitions of terms used throughout TOGAF and release notes detailing the changes between this version and the previous version of TOGAF. Part II - Architecture Development Method This is the core of TOGAF. It describes the TOGAF Architecture Development Method (ADM) a step-by-step approach to developing an enterprise architecture. Part III - ADM Guidelines & Techniques This part contains a collection of guidelines and techniques available for use in applying TOGAF and the TOGAF ADM. Part IV - Architecture Content Framework This part describes the TOGAF content framework, including a structured metamodel for architectural artifacts, the use of re-usable architecture building blocks, and an overview of typical architecture deliverables. Part V - Enterprise Continuum & Tools This part discusses appropriate taxonomies and tools to categorize and store the outputs of architecture activity within an enterprise. Part VI - TOGAF Reference Models This part provides a selection of architectural reference models, which includes the TOGAF Foundation Architecture, and the Integrated Information Infrastructure Reference Model (III-RM). Part VII Architecture Capability Framework This section looks at roles, Governance, compliance skills and much more practical guidance

The purpose of large-scale software architecture is to capture and describe practical representations to make development teams more effective. In this book the authors show how to utilise software architecture as a tool to guide the development instead of capturing the architectural details after all the design decisions have been made. * Offers a concise description of UML usage for large-scale architecture * Discusses software architecture and design principles * Technology and vendor independent
