Hi all, Just taken my BSAC OD Exam and passed it first time, although some of the questions were very controversial, something that annoyed me a little though was that 3 out of 5 of us passed, now the 2 that failed had to sit with the DO and go through the questions, they then had to agree that they understood why they got the questions wrong ..... and then DO passed them.

Sport diving is attracting more and more people of all ages who, once they've learnt the correct techniques, can enjoy the element of risk without being in any way endangered by it. In this invaluable book B. S. A. C. contributors give you all the essential information you need as a would-be sport diver. Every aspect of the sport is explained in straightforward language and illustrated with specially commissioned line drawings and photographs in both black and white and colour. All aspects of the sport are covered including a comprehensive guide to the required equipment, with full explanations of its use and maintenance, chapters on training, dive planning, seamanship, diving techniques, safety precautions and procedures and first aid. Finally there are notes on diving schools, special interests such as underwater photography and British and world diving locations.

This book covers everything the diving instructor should know, progressing from basic lessons in the pool, fault analysis and correction, surface lessons and underwater positioning, to teaching in open water, and more.

This is the first book to span the depth between traditional sport diving editions and the complex medical/commercial texts. It provides a balanced view of the fascinations and hazards of deep diving through extensive factual development of its technical chapters.

Master a complete roadmap for emerging market business success and profitability! Emerging markets are generating unprecedented opportunities, but they are far more complex and risky than they may seem. Profiting in these markets entails retooling business models, products, and strategies to exploit these differences, instead of falling victim to them. Too many American, European and Japanese companies continue to operate with a "developed world" mentality that seeks to merely adapt existing products and strategies, while underestimating the unique challenges of managing a business in radically different contexts. Operating in Emerging Markets draws from real-life examples and today's most valuable research to offer a step-by-step blueprint for improving profitability in emerging markets. Pioneering researchers Dr. Luciano Ciravegna and Dr. Robert Fitzgerald walk you through understanding the true risks and challenges; identifying and investing the right resources; developing the right strategies, products, and processes; and learning from both the successes and failures that have come before you. An indispensable resource for all decision-makers in companies that are (or plan to) operating in emerging markets; and for all graduate business students who may do so in the future. "Publications devoted to rapidly transforming economies are on the rise, but the contribution is often marginal. This new book, Operating in Emerging Markets , authored by Luciano Ciravegna, Robert Fitzgerald, and Sumit Kundu, is an exception. It provides valuable insights into what makes these economies grow and prosper. Most importantly, it responds to the need for practical approaches to tapping emerging markets. Thus it should assist current and future managers in navigating these high-potential but high-risk countries." --S. Tamer Cavusgil, Callaway Professorial Chair and Executive Director, CIBER, J. Mack Robinson College of Business, Georgia State University

Covers basic diving physiology; the pathophysiology of decompression sickness; maritime toxicology; assessment of fitness for diving; special considerations for female, elderly, and pediatric divers; diving-related problems in people with pre-existing medical conditions such as pulmonary, cardiac, and neurologic disease, and much more, with new chapters on the kinetics of inert gas, marine poisoning and intoxication, and diabetes and diving.

Teaching how to deal with diving emergencies, this is the British Sub-Aqua Club's standard textbook for divers of all standards. It begins with dive planning and accident prevention, and goes on to explain first aid and the treatment of injuries from burns and broken bones to hypothermia, decompression sickness and shock. A separate section on marine life describes treatment for bites and stings. Major rescue techniques are explained in detail, from towing an unconscious diver in the water to assisted ascents, and from rescuing an injured diver from the depths to landing him on boat or beach. The book also covers rescue management, including the use of rescue equipment and after-care.

This open access book provides a comprehensive examination of the European Landing Obligation policy from many relevant perspectives. It includes evaluations of its impacts at economical, socio-cultural, ecological and institutional levels. It also discusses the feasibility and benefits of several potential mitigation strategies. The book was timely published, exactly at the time where the Landing Obligation was planned to be fully implemented. This book is of significant interest to all stakeholders involved, but also to the general public of Europe and to other jurisdictions throughout the world that are also searching for ways to deal with by-catch and discard issues.

A reference to clinical diving medicine. Written for doctors and paramedics who are responsible for the medical needs of divers both on or under the water, this new edition retains the strengths of its predecessors, with the emphasis still firmly on practical management. It features an improved section on the diving medical examination, changes to chapters on mortality statistics and drowning, new sections on habitat diving, breath-hold diving and technical diving, and many new illustrations.
