Another good one by Thomas Hager I got this after reading Mr. Hager's "Demon Under the Microscope," which is one of the best books I've read in a long time. "The Alchemy of Air" isn't in the same class but is written with the same level of completeness and mix between science and social factors.

Quotes by Thomas Hager “ Where there were once several competing approaches to medicine, there is now only one that matters to most hospitals, insurers, and the vast majority of the public. One that has been shaped to a great degree by the successful development of potent cures that followed the discovery of sulfa drugs.

A profile of pioneering scientists Fritz Haber and Carl Bosch describes their seminal discovery of a way to pull nitrogen out of the air to create synthetic fertilizer, a process that offered a solution to the critical food shortage confronting a growing global population but also led to the development of the gunpowder and explosives that killed millions during the World Wars. 30,000 first printing.

A sweeping history of tragic genius, cutting-edge science, and the Haber-Bosch discovery that changed billions of lives—including your own. At the dawn of the twentieth century, humanity was facing global disaster: Mass starvation was about to become a reality. A call went out to the world's scientists to find a solution. This is the story of the two men who found it: brilliant, self-important Fritz Haber and reclusive, alcoholic Carl Bosch. Together they discovered a way to make bread out of air, built city-sized factories, and saved millions of lives. But their epochal triumph came at a price we are still paying. The Haber-Bosch process was also used to make the gunpowder and explosives that killed millions during the two world wars. Both men were vilified during their lives; both, disillusioned and disgraced, died tragically. The Alchemy of Air is the extraordinary, previously untold story of a discovery that changed the way we grow food and the way we make war—and that promises to continue shaping our lives in fundamental and dramatic ways.

A profile of pioneering scientists Fritz Haber and Carl Bosch describes their seminal discovery of a way to pull nitrogen out of the air to create synthetic fertilizer, a process that offered a solution to the critical food shortage confronting a growing global population but also led to the development of the gunpowder and explosives that killed millions during the World Wars. 30,000 first printing.

A sweeping history of the discovery of the world's first antibiotic, sulfa, and its seminal influence on the fields of medicine and science looks at key figures in the battle against disease, how sulfa changed the way in which doctors treated patients, and how it transformed how new drugs are developed, approved, and sold. Reprint. 20,000 first printing.

Behind every landmark drug is a story. It could be an oddball researcher's genius insight, a catalyzing moment in geopolitical history, a new breakthrough technology, or an unexpected but welcome side effect discovered during clinical trials. Piece together these stories, as Thomas Hager does in this remarkable, century-spanning history, and you can trace the evolution of our culture and the practice of medicine. † Beginning with opium, the "joy plant," which has been used for 10,000 years, Hager tells a captivating story of medicine. His subjects include the largely forgotten female pioneer who introduced smallpox inoculation to Britain, the infamous knockout drops, the first antibiotic, which saved countless lives, the first antipsychotic, which helped empty public mental hospitals, Viagra, statins, and the new frontier of monoclonal antibodies. This is a deep, wide-ranging, and wildly entertaining book.

Using, as their guide, the previously misunderstood interactions between Robert Boyle, widely known as "the father of chemistry," and George Starkey, an alchemist and the most prominent American scientific writer before Benjamin Franklin as their guide, Newman and Principe reveal the hitherto hidden laboratory operations of a famous alchemist and argue that many of the principles and practices characteristic of modern chemistry derive from alchemy.

Tracing the career of Linus Pauling, one of the century's greatest American scientists and the only person to win two unshared Nobel prizes, a meticulously researched chronicle shows how Pauling revolutionized chemistry and examines his controversial politics. 20,000 first printing.

This long-awaited biography of Fritz Haber, now abridged by the author and translated into English, illuminates the life of one of the most gifted yet controversial figures of the 20th century. Haber was a pioneer in electrochemistry and thermodynamics and won the Nobel Prize for his synthesis of ammonia, a process essential for both fertilizer and explosives. His dedication to work spurred his efforts to increase support for scientific study in Germany; yet it also helped cause the breakdown of his two marriages. His ardent patriotism led him to develop chemical weapons for World War I and to try to extract gold from seawater, to help pay for Germany's huge war reparations. Yet Haber, a Jew by birth, was exiled from his homeland in 1933 by the Nazi party and died shortly after.

Tells the story of controversial scientists Fritz Haber and Carl Bosch, who are credited with saving millions of lives while being responsible for the creation of the modern chemical industry.

Both the quest for natural knowledge and the aspiration to alchemical wisdom played crucial roles in the Scientific Revolution, as William R. Newman demonstrates in this fascinating book about George Starkey (1628-1665), America's first famous scientist. Beginning with Starkey's unusual education in colonial New England, Newman traces out his many interconnected careers—natural philosopher, alchemist, chemist, medical practitioner, economic projector, and creator of the fabulous adept, "Eirenaeus Philalethes." Newman reveals the profound impact Starkey had on the work of Isaac Newton, Robert Boyle, Samuel Hartlib, and other key thinkers in the realm of early modern science.
