"Robert DiYanni and Anton Borst's Classroom Confidential provides a clear, compact guide to the basics of college teaching. Grounded in the authors' classroom experience, their pedagogical coaching at NYU's Center for the Advancement of Teaching, and their examination of the latest learning science research, it explains how to teach in the college classroom from a learner's perspective-what methods, principles, and activities achieve the best learning outcomes. Chapters address major topics from course and syllabus design to discussion-based teaching, critical reading, and assessment, while brief "interludes" cover various pedagogical elements and applications-including what to do on the first and last days of class and how to incorporate service and experiential learning into curricula. Throughout, the authors provide practical suggestions and strategies, while explaining the underlying pedagogical principles. They also address recent topics that promise to remain fixtures of the educational landscape, such as teaching with technology and teaching in a global context. They steer a middle course on technology, suggesting ways to maximize its benefits while minimizing its distractions. The book coheres around a philosophy of active learning and student engagement. DiYanni and Borst argue that teaching practices should challenge students to think and learn, requiring them to do things with newly acquired knowledge-create models, conduct experiments, debate issues, and more. The authors enlist reliable scholarly research to demonstrate that active learning, of the kind they advocate, achieves results: students learn more and better, and their learning is deeper and longer lasting. The authors' pedagogy echoes their epistemology, as they demonstrate how learning and teaching are inextricably intertwined, organic rather than mechanical activities"--

There is ample evidence that current concentrations of tropospheric ozone (O₃) cause negative effects on plants. The present chapter describes a systematic and statistical sound way of monitoring visible injury at the European intensive monitoring plots that may allow detecting spatial and temporal trends on a national or transnational scale. The extended database of monitoring data from different forest ecosystems in more than 15 European countries and covering the past 10 years provides a solid

basis for O3 risk assessment. In combination with the current assessment of O3 visible injury on forest plants that are grown under natural field conditions, further, long-term studies of physiological measurements are needed to gain a better understanding of the complex interactions between plants and atmosphere, in particular, when considering climate change that may alter the risk of O3 for our forests.

Selling a business is a critical event that may occur only once in a lifetime. This is an event when you can't afford to make a mistake. Small business owners need basic guidance from someone who doesn't have a stake in the sale of their business. *Moving On: Getting the Most from the Sale of Your Small Business* is a straight forward, highly pragmatic discussion that will guide you through the sales process and help you avoid some of the common pitfalls faced by business owners that lack experience with the process. This book will assist you in finding the right professional help when you are ready. James F. Grebey, an operations management specialist who provides small business owners with insight into the sales process, helps you recognize pitfalls that could impact your sale negotiations. This book is replete with tips and tools that you will need to drive a successful sale of your business, such as writing the "book" used to market the business, and recommendations to create a working model with a dynamic (what if) spreadsheet to justify your sales projections. Readers will learn where to reach out for qualified professionals that can help with the sale process. A less-expensive grayscale paperback version is available. Search for ISBN 9781680923018. *Business Law I Essentials* is a brief introductory textbook designed to meet the scope and sequence requirements of courses on Business Law or the Legal Environment of Business. The concepts are presented in a streamlined manner, and cover the key concepts necessary to establish a strong foundation in the subject. The textbook follows a traditional approach to the study of business law. Each chapter contains learning objectives, explanatory narrative and concepts, references for further reading, and end-of-chapter questions. *Business Law I Essentials* may need to be supplemented with additional content, cases, or related materials, and is offered as a foundational resource that focuses on the baseline concepts, issues, and approaches.

This book takes a critical look at how students' achievements are assessed for a range of purposes, from reporting progress to selection and qualification. It considers the relationship between what is taught, and how, and what and how learning outcomes are assessed. The impact of using assessment results for setting targets and evaluation of provision for learning is also discussed. The pros and cons of using tests and examinations and alternatives based on the judgments of teachers are considered in terms of four key criteria: validity, reliability, impact and required resources. Evidence from research and examples of current practice in different countries within and outside the UK support the case for making more and better use

of teachers' judgments in assessment of learning. In this way assessment of learning (summative assessment) can be compatible with assessment for learning (formative assessment).

The second edition of the Impact Evaluation in Practice handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

This open access book presents detailed pathways to achieve 100% renewable energy by 2050, globally and across ten geographical regions. Based on state-of-the-art scenario modelling, it provides the vital missing link between renewable energy targets and the measures needed to achieve them. Bringing together the latest research in climate science, renewable energy technology, employment and resource impacts, the book breaks new ground by covering all the elements essential to achieving the ambitious climate mitigation targets set out in the Paris Climate Agreement. For example, sectoral implementation pathways, with special emphasis on differences between developed and developing countries and regional conditions, provide tools to implement the scenarios globally and domestically. Non-energy greenhouse gas mitigation scenarios define a sustainable pathway for land-use change and the agricultural sector. Furthermore, results of the impact of the scenarios on employment and mineral and resource requirements provide vital insight on economic and resource management implications. The book clearly demonstrates that the goals of the Paris Agreement are achievable and feasible with current technology and are beneficial in economic and employment terms. It is essential reading for anyone with responsibility for implementing renewable energy or climate targets internationally or domestically, including climate policy negotiators, policy-makers at all levels of government, businesses with renewable energy commitments, researchers and the renewable energy industry.
