Properly analyzed, the collective mythological and religious writings of humanity reveal that around 1500 BC, a comet swept perilously close to Earth, triggering widespread natural disasters and threatening the destruction of all life before settling into solar orbit as Venus, our nearest planetary neighbor. Sound implausible? Well, from 1950 until the late 1970s, a huge number of people begged to differ, as they devoured Immanuel Velikovsky's major best-seller, Worlds in Collision, insisting that perhaps this polymathic thinker held the key to a new science and a new history. Scientists, on the other hand, assaulted Velikovsky's book, his followers, and his press mercilessly from the get-go. In The Pseudoscience Wars, Michael D. Gordin resurrects the largely forgotten figure of Velikovsky and uses his strange career and surprisingly influential writings to explore the changing definitions of the line that separates legitimate scientific inquiry from what is deemed bunk, and to show how vital this question remains to us today. Drawing on a wealth of previously unpublished material from Velikovsky's personal archives, Gordin presents a behind-the-scenes history of the writer's career, from his initial burst of success through his growing influence on the counterculture, heated public battles with such luminaries as Carl Sagan, and eventual eclipse. Along the way, he offers fascinating glimpses into the histories and effects of other fringe doctrines, including creationism, Lysenkoism, parapsychology, and more—all of which have surprising connections to Velikovsky's theories. Science today is hardly universally secure, and scientists seem themselves beset by critics, denialists, and those they label "pseudoscientists"—as seen all too clearly in battles over evolution and climate change. The Pseudoscience Wars simultaneously reveals the surprising Cold War roots of our contemporary dilemma and points readers to a different approach to drawing the line between knowledge and nonsense.

Offers an architectural overview of the programming language, including Entity Beans, Session Beans, transactions, design strategies, and XML deployment descriptors.

For the first time, His Royal Highness Charles, the Prince of Wales, shares his views on how mankind's most pressing modern challenges are rooted in our disharmony with nature. In the vein of Al Gore's An Inconvenient Truth and Van Jones' Green Collar Economy, Prince Charles presents the compelling case that solutions to our most dire crises—from climate change to poverty—lie in regaining a balance with the world around us.

A much-needed guide to thinking critically for oneself and how to tell a good argument from a bad one. Includes topical examples from politics, sport, medicine, music, chapter summaries, glossary and exercises.

Without an effective network it is much harder to get a job, find business, influence people and much more. Most people are aware of this, but are not so sure how to go about building, maintaining and using a network. "Payforward Networking" is for these people. Based on the networking workshops taught for many years by communication consultant Andrew Hennigan in business schools and companies, it presents a simple, methodical approach to networking that is both effective and easy to master. At the same time it is also built on ethical "white hat" methods that will not make you feel uncomfortable or manipulative. The book covers the basics of networking in real-life and online, the essentials of online reputation management, the impact of culture on networking, strategic networking and much more.
