In the past fifteen years, most countries of Central and Eastern Europe and the Commonwealth of Independent States have shifted from predominantly collective to more individualized agriculture. These years also have witnessed the largest fall in agricultural production, yields, and rural employment on record, while the deterioration and dissolution of collective and state farms have been accompanied by a significant drop in rural public services. Land Reform and Farm Restructuring provides a structured and comparative review of important aspects of land reform and documents important differences in policies between countries to examine why the reforms have not yet lived up to their potential. It is based on data from farm and household surveys and interviews conducted in 2003 and 2004. Case studies from Bulgaria, Moldova, Azerbaijan, and Kazakhstan - countries that have had particular difficulties in land reform, farm restructuring, farm performance, or rural poverty - each highlight a central conundrum about land reform and farm restructuring. The paper concludes with some implications for policy.

Signals and Systems: A Primer with MATLAB® provides clear, interesting, and easy-to-understand coverage of continuous-time and discrete-time signals and systems. Each chapter opens with a historical profile or career talk, followed by an introduction that states the chapter objectives and links the chapter to the previous ones. All principles are presented in a lucid, logical, step-by-step approach. As much as possible, the authors avoid wordiness and detail overload that could hide concepts and impede understanding.

CD-ROM contains: Dynamic phase diagram tool -- Over 30 animations of concepts from the text -- Photomicrographs from the text.

This graduate textbook covers topics in statistical theory essential for graduate students preparing for work on a Ph.D. degree in statistics. This new edition has been revised and updated and in this fourth printing, errors have been ironed out. The first chapter provides a quick overview of concepts and results in measure-theoretic probability theory that are useful in statistics. The second chapter introduces some fundamental concepts in statistical decision theory and inference. Subsequent chapters contain detailed studies on some important topics: unbiased estimation, parametric estimation, nonparametric estimation, hypothesis testing, and confidence sets. A large number of exercises in each chapter provide not only practice problems for students, but also many additional results.

She snoops around creepy farmhouses and grim garrets, eerie rooms and dark corners, exposing the ghosts and recording first-hand accounts of terrifying encounters. Clear maps and photographs help readers locate each dire destination, while more sensitive souls can enjoy experiencing these visits from the other side from the safety of their armchair.
