All solid components of the dry mortar formulation (Table 2) were premixed, including the cement, sand, filler, the water repellent (dosage = 0.2 - 0.5 %; referring to the total amount of dry material) and other additives. To this premix 3/4 of the total amount of water is added under continuous stirring in a Hobart-Mixer.

From ARCOM and The American Institute of Architects A complete visual guide to choosing and using finishmaterials In this unique guide, the authors of MASTERSPEC and ArchitecturalGraphic Standards join forces to offer architects vitalsingle-source access to the unbiased information they need toevaluate, select, and specify the best finish materials for anyjob. This powerful visual resource combines hundreds of illustrationsfrom Architectural Graphic Standards with corresponding buildingmaterial performance and specification information from AIA'sMASTERSPEC, published by ARCOM. Use this book during the schematicand design development phases of a project and as an indispensableaid for product selection and specification. Essential for architects, interior designers, and buildingdesigners, this vital reference provides information to makeinformed decisions about specific design goals, such asaffordability, environmental friendliness, durability, fireresistance, and esthetic success. Features include: * Unique source of independent, in-depth building productperformance information-the one source that gives you reliablebuilding product information before you consult withmanufacturers * Covers a full range of standard finish materials and includesselection criteria, details, typical product sizes, andinstallation and maintenance data * Provides current standards based on research by government,association, and independent testing organizations as well as theinput of experienced architects and specifiers "Architectural Graphic Standards has served the design communityfor decades as a virtual 'bible' for architectural detailing.MASTERSPEC Evaluations have long comprised one of the bestresources available for building product selection andspecification. Consolidating the strong points of both into thisnew desktop reference is an act of sheer brilliance!" -Martin M. Bloomenthal, FAIA, CCS, CSI, Principal, The HillierGroup, Princeton, New Jersey

Developments in the Formulation and Reinforcement of Concrete, Second Edition, presents the latest developments on topics covered in the first edition. In addition, it includes new chapters on supplementary cementitious

materials, mass concrete, the sustainability of concrete, service life prediction, limestone cements, the corrosion of steel in concrete, alkali-aggregate reactions, and concrete as a multiscale material. The book's chapters introduce the reader to some of the most important issues facing today's concrete industry. With its distinguished editor and international team of contributors, users will find this to be a must-have reference for civil and structural engineers. Summarizes a wealth of recent research on structural concrete, including material microstructure, concrete types, and variation and construction techniques Emphasizes concrete mixture design and applications in civil and structural engineering Reviews modern concrete materials and novel construction systems, such as the precast industry and structures requiring high-performance concrete

This book offers readers the most popular patio and walkway designs complete with step-by-step, full-color photo instructions. The projects are affordable yet on-trend and highly valuable, as they increase house value and living space. Original.

Surface active agents are used as process aids in the production of polymers--as additives to impart or modify polymer properties--and in the formulation and further processing of polymeric systems for a variety of applications. In all these uses, the surfactants are used as 'effect chemicals,' to impart specific performance characteristics or properties to the base polymer or to enhance its performance when formulated for a specific end use. This volume focuses on those surfactant areas incorporating the greatest number of supplier and user companies. Authors have been selected from leading industrial and academic laboratories around the world. It provides an introduction to the underlying chemistry and technology in these industrial areas, and at the same time, highlights important recent developments. Surfactants in Polymers, Coatings, Inks and Adhesives is a book for surfactant researchers and for manufacturers and users of surfactants. In particular, surfactant chemists, analytical chemists, environmental chemists, users of surfactant formulations in the fields of specialty chemicals, polymers, and detergents, and health and safety personnel.
