The duration of this internship is at least 3 months. How do you want to contribute to tomorrow's world? How big can your impact be? Come and work at TNO and envision it. You are in the final stages ...

How we produce and consume food has a bigger impact on Americans' well-being than any other human activity. The food industry is the largest sector of our economy; food touches everything from our health to the environment, climate change, economic inequality, and the federal budget. From the earliest developments of agriculture, a major goal has been to attain sufficient foods that provide the energy and the nutrients needed for a healthy, active life. Over time, food production, processing, marketing, and consumption have evolved and become highly complex. The challenges of improving the food system in the 21st century will require systemic approaches that take full account of social, economic, ecological, and evolutionary factors. Policy or business interventions involving a segment of the food system often have consequences beyond the original issue the intervention was meant to address. A Framework for Assessing Effects of the Food System develops an analytical framework for assessing effects associated with the ways in which food is grown, processed, distributed, marketed, retailed, and consumed in the United States. The framework will allow users to recognize effects across the full food system, consider all domains and dimensions of effects, account for systems dynamics and complexities, and choose appropriate methods for analysis. This report provides example applications of the framework based on complex questions that are currently under debate: consumption of a healthy and safe diet, food security, animal welfare, and preserving the environment and its resources. A Framework for Assessing Effects of the Food System describes the U.S. food system and provides a brief history of its evolution into the current system. This report identifies some of the real and potential implications of the current system in terms of its health, environmental, and socioeconomic effects along with a sense for the complexities of the system, potential metrics, and some of the data needs that are required to assess the effects. The overview of the food system and the framework described in this report will be an essential resource for decision makers, researchers, and others to examine the possible impacts of alternative policies or agricultural or food processing practices.

This book, by Abdessatar Ouanes and Subhash Thakur presents the principal elements of macroeconomic accounting and analysis for the real, fiscal, monetary, and external sectors of a transition economy, using Poland as a case study. Background information, exercises, and issues for discussion are also provided.

This report assesses the economic dimensions of security in Central Asia, and considers their implications for the role of the United States. Economic development will be crucial to the future of Central Asia and broader U.S. interests in the region. However, it is unclear whether the states in the region have the institutional capacity to implement domestic reform. As the United States clarifies its long-term military relationships and commitments in the region, it should consider the region's economic development itself as a long-term security concern.

Global value chains (GVCs) have been a feature of the international economic architecture for many years, but scholarly interest in the phenomenon is more recent. Today that interest is intense, emanating from an array of academic disciplines as well as from the policy world. The literature that attempts to understand and explain GVCs is vast, multidisciplinary and no less complex than the phenomenon itself. This volume, jointly produced by the Fung Global Institute and the World Trade Organization, is an attempt to capture the core features and themes of the exploding literature on GVCs. Contents Part I. Supply Chain Perspectives 1. Supply chains in the economics literature 2. Supply chains in the business literature Part II. Supply Chain Issues 3. Supply chains and offshoring 4. Supply chains, upgrading and development 5. Supply chains and risk 6. Supply chains and SMEs 7. Supply chains and services 8. Supply chains and trade in value-added 9. Supply chains and business models 10. Supply chains and sustainability 11. Supply chains and trade policy 12. Supply chains and trade

finance

This pamphlet excerpts a chapter on macroeconomic policy from the Poverty Reduction Policy Sourcebook, a guide prepared by the World Bank and the IMF to assist countries in developing and strengthening their poverty reduction strategies. It probes the relationship between macroeconomic policy matters, such as growth and inflation, and the fight against poverty, explains how sound monetary and fiscal policies--key tools of the macroeconomist--can help to spur growth and ease poverty.

An overview and analysis of austerity policies and labor movement resistance in several countries. Austerity policies have become the new norm throughout both the developed and developing world. Indeed, austerity has become the new buzz word in the lexicon of politicians from across the political spectrum. At the same time austerity measures have been met with mass protest, the most famous example of which is the Occupy Movement. In the not-too-distant past it would have been the labor movement at the forefront resisting policies that arguably disproportionately target working people and their families. Throughout the twentieth century it was the labor movement that fought for all working people. However, there is an increasing assumption that the labor movement is unable to adequately defend workers from the onslaught of austerity measures. *Austerity and the Labor Movement* analyzes whether this assumption is indeed true. Examining the labor movements in the US, UK, Greece, Ireland, and Spain, Michael Schiavone provides a systematic explanation of the appeal of austerity policies in certain circles and why the labor movement in each of these countries has been largely unsuccessful in overturning such policies. He argues that the labor movement needs to make major changes and embrace social movement unionism if it has any hope to stop its decline and have any chance to successfully fight against austerity and neoliberalism more generally.

"This book assembles papers that were produced under a three year collaborative research program on 'China and APEC' undertaken by the AustraliaJapan Research Centre, in the Asia Pacific School of Economics and Management at The Australian National University and the APEC Policy Research Center, in the Chinese Academy of Social Sciences. ... The work on this project and the papers in the volume provide a base for developing ideas that could be helpful to the policy agenda for APEC 2001."--Preface.
