This title was first published in 2000: This work is aimed at international managers or business students who are interested in emerging markets, particularly China. It provides conceptual backgrounds, analytical frameworks, managerial insights, business guidance, and practical evidence concerning partner selection for both foreign and Chinese investors. It addresses how foreign companies should select ideal Chinese firms as well as what Chinese firms are looking for from foreign investors. The book is divided into three parts. The first part presents an overview of multinational enterprises (MNEs) in China and outlines the economic environment facing these firms. The second part delineates how to select appropriate partner firms from both foreign and Chinese parents perspectives. The third part includes ten case studies showing how leading MNEs in the world adopt entry and co-operative strategies (including partner selection) that align properly with internal capabilities, external environment, and organizational needs. Based on a variety of archival and Internet sources, these case studies are prepared by the author for discussion purposes.

In todayand's fast-paced and ultra-competitive high-tech environment, an effectively managed patent licensing program is a must. The Second Editio n of Drafting Technology Patent License Agreements shows you how to achieve one. This valuable resource covers all of the legal and business transactional issues you are likely to encounter during the drafting and negotiation of patent licensing agreements. It guides you step-by-step through the unique aspects of the implementation of a patent licensing program for computers, electronics, telecommunications, and other industries, and it clarifies the issues involved in the enforcement and litigation of these patents. Youand'll find incisive legal analysis on complex issues including: How to implement an aggressive and well-managed patent licensing program How to evaluate a patent or portfolio for licensing How to identify industry segments and select potential licensees How to discuss terms with industry targets How to formulate an effective licensing strategy How to use databases effectively in patent practice How to organize a licensing team How to file a patent infringement lawsuit And many more critical issues like these. Included with this key resource are 40 time-saving forms on the bonus CD-ROM: Forms for establishing a new technology company using patented technology Confidentiality agreements (for a third-party vendor, third party evaluation, or consultant) A projected royalty stream analysis A semiconductor technology cross-licensing agreement Software technology license agreements Model licensing and patent agreements for the telecommunications industry And many more!

"Dynamic Modelling for Supply Chain Management" discusses how to streamline complex supply chain management by making the most of the growing number of tools available. The reader is introduced to the basic foundations from which to develop intelligent management strategies, as the book characterises the process and framework of modern supply chain management. The author reviews supply chain management concepts and singles out important factors in the management of modern complex production systems. Particular attention is paid to modern simulation modelling tools that can be used to support supply chain planning and control. The book explores the operational and financial impacts of various potential problems, offering a compilation of practical models to help identify solutions. A useful reference on supply chain management, "Dynamic Modelling for Supply Chain Management" will benefit engineers and professionals working in a variety of areas, from supply chain management to product engineering.

4 zettabytes (4 billion terabytes) of data generated in 2013, 44 zettabytes predicted for 2020 and 185 zettabytes for 2025. These figures are staggering and perfectly illustrate this new era of data deluge. Data has become a major economic and social challenge. The speed of processing of these data is the weakest link in a computer system: the storage system. It is therefore crucial to optimize this operation. During the last decade, storage systems have experienced a major revolution: the advent of flash memory. Flash Memory Integration: Performance and Energy Issues contributes to a better understanding of these revolutions. The authors offer us an insight into the integration of flash memory in computer systems, their behavior in performance and in power consumption compared to traditional storage systems. The book also presents, in their entirety, various methods for measuring the performance and energy consumption of storage systems for embedded as well as desktop/server computer systems. We are invited on a journey to the memories of the future. Ideal for computer scientists, featuring low level details to concentrate on system issues Tackles flash memory aspects while spanning domains such as embedded systems and HPC Contains an exhaustive set of experimental results conducted in the Lab-STICC laboratory Provides details on methodologies to perform performance and energy measurements on flash storage systems

This book constitutes the thoroughly refereed proceedings of the 4th International Conference on Abstract State Machines, B, TLA, VDM and Z, which took place in Toulouse, France, in June 2014. The 13 full papers presented together with 3 invited talks and 19 short papers were carefully reviewed and selected from 81 submissions. The ABZ conference series is dedicated to the cross-fertilization of six related state-based and machine-based formal methods: Abstract State Machines (ASM), Alloy, B, TLA, VDM and Z. They share a common conceptual foundation and are widely used in both academia and industry for the design and analysis of hardware and software systems. The main goal of this conference series is to contribute to the integration of these formal methods, clarifying their commonalities and differences to better understand how to combine different approaches for accomplishing the various tasks in modeling, experimental validation and mathematical verification of reliable high-quality hardware/software systems.
