The 3.9L and 4.2L V6 engines were both enlarged versions of the long-running 3.8L V6. As part of the initiative to improve driveline reliability, the 4-speed automatic transmission ...

A 4.2-liter version was introduced in the mid-1990s for use in the F-150 and Ford E-Series, later, the Freestar and Monterey. The 3.8-liter V6 was replaced by a 3.9 L version in 2004, though changes were minimal. The Essex and the smaller Vulcan V6 were the last traditional overhead valve engines built by Ford until 2019.

The economies of South Korea and Taiwan in the second half of the twentieth century are to scholars of economic development what the economy of Britain in the late eighteenth and early nineteenth centuries is to economic historians. This book, first published in 2006, is a collaboration between a leading trade economist and a leading economic sociologist specializing in East Asia, and offers an explanation of the development paths of post-World War II Korea and Taiwan. The ambitions of the authors go beyond this, however. They use these cases to reshape the way economists, sociologists, and political scientists will think about economic organization in the future. They offer nothing less than a theory of, and extended evidence for, how

capitalist economies become organized. One of the principal empirical findings is that a primary cause for the industrialization of East Asia is the retail revolution in the United States and the demand-responsiveness of Asian manufacturers.

product regulations and suddenly altered consumer demand. With gas prices soaring and the economy in a veritable tailspin, muscle cars and the massive "need-for-speed" engines of the late '60s were out, and fuel efficient compacts were in. By 1980, American manufacturers were churning out some of the most feature laden, yet smallest and most fuel efficient cars they had ever built. This exhaustive reference work details every model from each of the major American manufacturers from model years 1973 through 1980, including various "captive imports" (e.g. Dodge's Colt, built by Mitsubishi.) Within each model year, it reports on each manufacturer's significant news and details every model offered: its specifications, powertrain offerings, prices, standard features, major

options, and production figures, among other facts. The work is heavily illustrated with approximately 1,300 photographs.

Offers a window into the vanity and silliness of almost every decade as expressed by the ultimate status symbol of the car, showcasing the cheapest, tackiest, and most mechanically inept vehicles built from the 1960s to the 1990s.
