Stroke is one of the major causes of disability in the world. Consequently, an effective rehabilitation regimen is the goal of specialists working in the field worldwide. The implementation of rehabilitation programs for the stroke patient is broad in scope and requires, first of all, an objective scientific evaluation method. In 1980 the World Health Organization developed the International Classification of Impairments, Disabilities, and Handicaps. It categorized impairments and disabilities on the basis of functional evaluation but took into account cultural and socioeconomic factors when defining handicaps, thus making it difficult to use the same functional evaluation instrument for the three phenomena. In this monograph, experts in the treatment of stroke from Japan, the United States, and Europe share their ideas presented during the 31st Annual Convention of the Japanese Association of Rehabilitation Medicine held in June 1994. All the participants freely contributed their views on the functional assessment and prognosis of stroke patients. Indeed, their contributions shed light on possible breakthroughs in the future for the development of rehabilitation regimens for stroke patients.

The new, therapeutically-focused Botulinum Toxin presents comprehensive, cross-disciplinary guidance on current practices, covering more than 100 non-cosmetic conditions that occur in neurology, physical medicine and rehabilitation, pain medicine, ophthalmology, gastroenterology, urology, orthopedics, and surgery. International contributors review the current understanding of the biology and cellular mechanisms along with relevant research so you can easily apply them to the pathophysiology of the numerous disorders that botulinum toxin is used to treat—such as botulinum toxin applications for the treatment of cranial-cervical dystonias, motor disorders in cerebral palsy, bruxism and temporomandibular disorders, headache, overactive bladder, chronic pelvic pain syndromes, arthritis joint pain, and wound healing. With discussions of the latest in approved treatment practices as well as new and emerging uses, you'll get in-depth management guidance on the application of the toxin. Provides clinical applications of botulinum toxin for over 100 disorders for immediate access and easy reference during practice and treatment. Covers a broad array of hot topics, including botulinum toxin applications for the treatment of cranial-cervical dystonias, motor disorders in cerebral palsy, bruxism and temporomandibular disorders, headache, overactive bladder, chronic pelvic pain syndromes, arthritis joint pain, and wound healing. Focuses on approved uses with expert advice on thoroughly tested applications but also discusses new and emerging applications to expose you to additional treatment options. Presents the most comprehensive and up-to-date material available so you get all the information you need from this one resource. Offers the cross-disciplinary guidance of the best world-class expertise through an authoritative, international group of authors who demonstrate the applications of botulinum toxin across various specialties.

This unique, concise ready reference for daily use collates for the first time the most useful, practical and simple assessment scales used in geriatric settings. It provides tools to identify clinical conditions and health outcomes objectively and reliably. It is essential as a clinical primer and everyday reference guide for all practising and training members of multidisciplinary teams, including consultants and doctors in specialist training, career grade doctors and general practitioners, and medical students; nurses, health visitors, dieticians, and social workers; allied health professionals such as physiotherapists, occupational therapists, speech and language therapists; and managers of elderly care services. Assessment is central to the practice of Geriatric Medicine. All members of the multidisciplinary team require a sound knowledge of the basic principles of measurement scales. We need to be competent in using and selecting appropriate scales, understanding which scales are valid and fit for purpose. Unfortunately, up to now, this has been a difficult task often requiring reference to original papers. Dr Gupta's scholarship has come to the rescue. He has trawled through the many hundreds of scales available selecting those most useful for the specialty. This book will be valuable to all members of the multidisciplinary team. Dr Gupta has done an excellent job outlining the theory and practice of measurement scales. He has put together an extremely useful compendium of scales. I congratulate him and wish his publication every success. I can foresee this publication becoming an essential text for every unit library and valuable book for individual clinicians. - Dr Jeremy Playfer in his Foreword. This book summarises the most commonly used validated assessment scales which can be used by medical students, postgraduate trainees, consultants and the multi-disciplinary team members. I hope a copy of this book will be kept on every ward, outpatient department and GP practice for daily use and reference. - Professor Bim Bhowmick OBE in his Foreword.

You'll want to keep this practical volume within easy reach! Now thoroughly updated, this Third Edition provides an overview of the knowledge and skills required for current practice in the physical rehabilitation of children. Readers will learn to integrate essential information into a physical therapy evaluation and treatment plan. Organized by disability and diseases, then by specialty, the text addresses the most current information on each disability, and presents evaluation techniques and suitable interventions. Unlike other books, this unique guide covers neurological disorders, neuromuscular problems, developmental disabilities, orthopedic and cardiopulmonary disorders -- all in chapters written by recognized experts. Noteworthy in this edition: coverage of orthopedic and limb deficiency, traumatic brain injury, cerebral palsy, spina bifida, and assistive devices.

Now in its fourth edition trusted textbook Older People: Issues and Innovations in Care provides a unique collection of conversations and commentaries by leading international and local experts on a range of contemporary issues around the care of older people. Featuring six new chapters, current research and policy changes, the esteemed author team continue to highlight the importance of interdisciplinary healthcare in providing a comprehensive, person-centred approach to care. This edition encourages readers to explore care issues, innovations and change, and to utilise evidence-based practice to improve the care of older people and their families. - Editors' comments precede each chapter, providing a snapshot of the issues addressed. - Dementia care has an increased focus. New chapters include: - Caring for older people: issues for consumers - Younger people in residential aged care facilities - Health and care of older Aboriginal and Torres Strait Islander peoples - Alzheimer's dementia: neuropsychology, early diagnosis and intervention - Self-esteem, dignity and finding meaning in dementia - My journey of heartbreak: my parents and Alzheimer's disease. - Vignettes highlight innovative approaches to care that result in improved health outcomes for older people. - Key points are woven through the text to reiterate vital information relevant to nurses and aged care workers. - Reflective questions encourage critical thinking as an instrument for improving practice. - In-text references are made to video interviews available on the Evolve site. This text reflects new thinking in care; include the ideas and experiences of policy analysts, nurses, doctors, allied health professionals and the consumer experience mainly from Australia but with international contributions and be based on contemporary research. It will also point readers to 'the evidence' where it exists, and include vignettes of practice and 'video' clips where appropriate.

This edition captures the underlying new approach in patient-centred care and thinking from a multidisciplinary perspective. It highlights the most recent ideas and experiences of policy analysts, nurses, doctors, allied health professionals and the consumer experience from both Australia and Internationally. Contemporary research compliments the vignettes of practice and in conjunction with accompanying 'video' clips serve to capture the realities of caring for older people in our society. Change in focus of health care system with the patient-centred care taking precedence and this new philosophy is incorporated into the third edition. Key focus on issues and innovations in aged care, with evidence-based examples and clinical vignettes included throughout the new edition. Cases are incorporated into each chapter to re-enforce and highlight many issues faced by nurses and health care workers in aged care. Written by experts in the field of aged care. Accompanying DVD, provides video clips of interviews with health practitioners and it highlights innovations to health care demands; issues such as dementia and broader aging issues. These serve to re-enforce the underpinning interdisciplinary and innovative approach of the third edition. An Evolve ebook will be available of this title. This text reflects new thinking in care; include the ideas and experiences of policy analysts, nurses, doctors, allied health professionals and the consumer experience mainly from Australia but with international contributions and be based on contemporary research. It will also point readers to 'the evidence' where it exists, and include vignettes of practice and 'video' clips where appropriate.

Guest edited by Drs. Marjorie Eskay-Auerbach and Robert Rondinelli, this issue of Physical Medicine and Rehabilitation Clinics will discuss Medical Impairment and Disability Evaluation and Associated Medicolegal Issues. This issue is one of four selected each year by our series Consulting Editor, Dr. Santos Martinez of the Campbell Clinic. Topics in this issue include, but are not limited to: The Physician's Approach to Impairment Rating and Disability Benefits Determinations; Claimant-related Issues; Evaluating Return-to-work ability using Functional Capacity Evaluation; Evaluating Human Functioning Using CAT Methodology for Disability Determination within the SSA; Burden of treatment compliance; Measuring Quality of Life Loss in Litigation; Medical-Legal Causation Analysis; Actuarial Analysis and Life Expectancy Determination after Catastrophic Illness or Injury; Validity Assessment in Acquired Brain Injury Disability Evaluation; Medicolegal Expert Core Competencies & Professionalism; The Physician as Expert Witness; Rehabilitating the Injured Worker to Maximum Medical Improvement (MMI); The Independent Medical Examination (IME); and Life Care Planning, among other topics.

Worldwide economic constraints on health care systems have highlighted the importance of evidence-based medicine and evidence-based health policy. The resulting clinical trials and health services research studies require instruments to monitor the outcomes of care and the output of the health system. However, the over-abundance of competing measurement scales can make choosing a measure difficult at best. Measuring Health provides in-depth reviews of over 100 of the leading health measurement tools and serves as a guide for choosing among them. Now in its third edition, this book provides a critical overview of the field of health measurement, with a technical introduction and discussion of the history and future directions for the field. This latest edition updates the information on each of the measures previously reviewed, and includes a complete new chapter on anxiety measurement to accompany the one on depression. It has also added new instruments to those previously reviewed in each of the chapters in the book. Chapters cover measurements of physical disability, social health, psychological well-being, anxiety, depression, mental status testing, pain, general health status and quality of life. Each chapter presents a tabular comparison of the quality of the instruments reviewed, followed by a detailed description of each method, covering its purpose and conceptual basis, its reliability and validity and, where possible, shows a copy of the actual scale. To ensure accuracy of the information, each review has been approved by the original author of each instrument or by an acknowledged expert.
