Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine, and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish. Backpacker's Editors' Choice Awards, an industry honor recognizing design, feature and product innovation, has become the gold standard against which all other outdoor-industry awards are measured.

CD-ROM contains: Air survey logistics planner, tables 12.3, 12.4, 12.5, 12.6 and sample MF-DMC imagery.

This book provides an overview of the ecological indicators of landscape dynamics in the context of geographical landscape integration. Landscape dynamics depicts every change that occurs in the physical, biological, and cognitive assets of a landscape. To understand and interpret the complex physical, biological, and cognitive phenomena of landscapes, it is necessary to operate conceptually and practically on a broad range of spatial and temporal scales. Rapid land use changes have become a concern to environmentalists and planners because of their impacts on the natural ecosystem, which further determines socioeconomic dynamics. In this regard, the book discusses case studies that share new insights into how landscape patterns and processes impact small creatures, and how small creatures in turn influence landscape structure and composition. In turn, the relevant aspects of land use and land cover dynamics are covered, and the multi-faceted relationship between the substrata and ecological community is highlighted. The book is unique in its focus on the application of spatial informatics such as automatic building extraction from high-resolution imagery; a soil resource inventory for meeting the challenges of land degradation; hydrological modeling; the temporal variation analysis of glacier area and the identification and mapping of glacial lakes; morphometric analysis of river basins; and the

monitoring and modeling of urban sprawl, among other features.

This book presents fundamental and applied research aimed at the development of smart cities across India. Based on the exploration of an extensive array of multidisciplinary literature, this book discusses critical factors of smart city initiatives: management and organization, technology, governance, policy, people and communities, economy, infrastructure, and natural environment. These factors are broadly covered under the integrative framework of the book to examine the vision and challenges of smart city initiatives. The book suggests directions and agendas for smart city research and outlines practical implications for government professionals, students, research scholars and policy makers. A lot of work is happening on smart cities as it is an upcoming area of research and development. At international level, and even in India, the concept of smart cities concept is a hot topic at universities, research centers, ministries, transport departments, civic bodies, environment, energy and disaster organizations, town planners and policy makers. This book provides ideas and information to government officials, investors, experts and research students.

Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine, and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish. Backpacker's Editors' Choice Awards, an industry honor recognizing design, feature and product innovation, has become the gold standard against which all other outdoor-industry awards are measured.

Scientific Essay from the year 2015 in the subject Geography / Earth Science - Miscellaneous, Yogi Vemana University, language: English, abstract: Groundwater is an important water resource in India for domestic, irrigation and industrial purposes. Swift unscientific and unsuitable groundwater developments in India suitable to even increasing population, urbanization, industrialization alters. The hydrological and geochemical environment of aquifers leads to groundwater pollution. Groundwater pollution suitable to geogenic and anthropogenic factors causes the groundwater non-potable and utilization of this water lead to health problems. Access of drinking water is measured by the number of people who has a reasonable means of getting an adequate amount of water that is safe for drinking. There is a substantial shortfall in the availability of potable water in less developed countries, primarily arising from contamination and pollution. Endemic fluorosis is a major health issue occurring due to utilization of fluoride in groundwater is nationally important. Fluoride ion in drinking water is known for both beneficial and detrimental effects on health. It is essential for normal mineralization of bones and formation of dental enamel with presence in small quantity. However, when consumed in higher doses (>1.5mg/l), it leads to dental fluorosis or mottled enamel and excessively high concentration (>3.0mg/l) of fluoride may lead to skeletal fluorosis. Presence of high concentration of fluoride in groundwater is a major problem in many countries as it causes health related problems. The selected study area is located in Southeastern part of Anantapur District, Andhra Pradesh. The geographical position of the Peninsula renders it, the driest part of the state and hence, agriculture conditions are more often precarious. The study area mainly exposes peninsular gneisses of Archean age consisting of pink granites, schists, composite gneisses of Dharwar age, intruded by a few pegmatite dykes. The major geomorphic units of the study area are mainly divided into Denudational Hills, Dissected pediments, Pediplain, and alluvium. The important rivers in the district are Penna, Chitravathi, Vedavathi and Hagari. The normal rainfall of the district is 553 mm by which it secures least rainfall when compared to Rayalaseema and other parts of Andhra Pradesh. The area experiences a semiarid climate with a moisture index of 33.7% with mean monthly temperatures of 17°C in January to 42°C in May.
