Increasing numbers of ecologists and conservation biologists have begun to explore the use of drone technology to obtain accurate and up-to-date data on the distribution and density of species, as well as the threats to their habitats, in their ongoing attempts to conserve and monitor biodiversity. Conservation drones are low-cost, autonomous, and operator-friendly unmanned aerial vehicles that can be used for surveying, mapping, and monitoring both habitat and biodiversity. They are fast becoming a valuable complement to ground-based surveys and satellite imagery for a wide range of ecological and conservation applications. The authors pioneered the use of conservation drones for the purpose of monitoring orangutan populations in Southeast Asia. They subsequently founded ConservationDrones.org to share their knowledge of building and using drones with colleagues in the wider environmental community. This website has proved highly popular and this book aims to further build capacity to use drones and inspire others to adapt emerging technologies for practical conservation.

Every year in the US, almost two million children run away from home. In addition, on the average, the police in our country have at any one time over 100,000 active missing-adult cases. This book will show readers how, with just a little advance preparation and insight, they can greatly increase their chances of finding a missing loved one, even after police have stopped actively looking. With sensationalized child disappearances, teenagers vanishing, and adults faking their own deaths, the challenge of finding missing persons often falls most directly on those who love them. And though in past years this involved a considerable amount of footwork, that is no longer the case. With the advent of the Internet and the many new search engines available, much of the searching and canvassing can now be done from computers. Family members and friends looking for missing loved ones need to know what programs and databases to access, though, to get the search under way. Snow, reveals to readers the process the police use when trying to locate missing people of interest, information that readers can then use to locate their own missing loved ones. Using real stories and first hand accounts, the author offers hope and guidance to those who may have given up the search for a child, a spouse, a parent, or a friend.
