The H-T-P test. | Semantic Scholar

Description. The House-Tree-Person (H-T-P) technique, developed by John Buck (1948) and Emmanuel Hammer (1958), is one of the most widely used projective tests for children and adults. It can be used with individuals aged 3 years and older and is almost entirely unstructured; the respondent is simply instructed to make a freehand drawing of a house, a tree, and a person.

House-Tree-Person Test | SpringerLink

The instructions given to the test-taker are quite short and simple. "Draw me as good a house as you can", states it well. Once the picture of a house is completed, the test-taker is asked to draw a tree, and later a person. Questions. After the test-taker draws objects, the administrator poses some questions to him/her.

Interpretation of the House-Tree-Person (HTP) Psychology Test

The House-Tree-Person Projective Drawing Technique: Manual And Interpretive Guide. SKU: W-306. By John N. Buck, revised by W. L. Warren, PhD. The definitive guide to administering, scoring, and interpreting the House-Tree-Person (H-T-P), this manual gives you quick access to accepted interpretive concepts.

(H-T-P) House-Tree-Person Projective Drawing Technique

The house-tree-person test can be an effective way to evaluate children, people with brain damage and people with a limited ability to communicate for personality disorders 2. A projective personality test, the house-tree-person test requires the test taker to draw a house, a tree and a person 3. The test is then used as a measure of self-perception, outlook and sometimes brain damage.

How to Interpret the House-Tree-Person Test | Healthfully

The House-Tree-Person Test (HTP) is a projective technique designed to determine the main personality traits of a person who performs it. It's often used during job interviews and different kinds of evaluations. Draw a house, a tree, and a person. Now get ready to discover what your drawing can tell about your personality.

This House-Tree-Person Test Will Determine Your Personality

The house-tree-person test (HTP) is a projective personality test, a type of exam in which the test taker responds to or provides ambiguous, abstract, or unstructured stimuli (often in the form of pictures or drawings).

H-T-P (House Tree Person)

I. House-Tree-Person (1) House: Present a piece of plain, white 8.5x11-inch paper at an angle to the subject and say: "Here I want you to draw a house as good as you can." Use these questions as a guide: Who lives here? Are they happy? What goes on inside? What's it like at night? Do people visit here?

Art therapy - Wikipedia

This hardcover book provides background on projective drawing techniques and insight into the House-Tree-Person (H-T-P) and Draw-A-Person (D-A-P) techniques. The book describes the development and administration of an objective scoring system for use by clinicians, teachers, and other professionals.

This book contains the first documentation of combining house, tree, and person into a single drawing. It helps enrich clinician's test batteries and aids psychologists and physicians in understanding the emotions and self-awareness of their clients. It is richly illustrated and teaches the important skill of using visual metaphors in clinical settings to understand and assist clients. The author covers all aspects of drawing interpretation, including size, placement, stroke or line characteristics, and the possible individual characteristics of each element within the house, tree, and person drawings.

House-Tree-Person is a projective personality test, wherein a person responds to a given stimuli, and the responses give clues about the person's hidden emotions or internal conflicts. The individual taking the test is asked to draw primary objects like a house, tree, and a person; that's why the name. These drawings render a measure of self perceptions and attitudes inherent in a personality. The HTP test is adhered to, along with other techniques, in cases where there is likelihood of brain damage, other neurological disorders, or to evaluate brain damage in patients of schizophrenia. It can be taken in any language by anyone who is 3 years old or above. The test consumes around 150 minutes. The person taking the test is first asked to draw, and then is later questioned based on his/her illustration. Usually, the first phase of drawing is colored using crayons, and then pencil is used for the next phase. The instructions given to the test-taker are quite short and simple. "Draw me as good a house as you can", states it well. Once the picture of a house is completed, the test-taker is asked to draw a tree, and later a person. If we are told to draw some object, we might either shy away (for not being good at it) or we might enjoy the process itself (regardless of our artistic abilities). Whichever way, drawing gives us a sense of revisiting our childhood memories full of such fun activities. Similar to writing, the act of drawing forms a powerful medium for us to let our emotions out. As we know, and some of us might even have experienced, that forms of fine art, including drawing, are seen to be stress-releasing activities. Off the mind and onto the paper. This is the knack behind a psychological personality test like the House-Tree-Person test. It is like reading our minds from what we have scribbled or sketched on a sheet of paper. This test is a technique developed by John N. Buck, an early clinical psychologist in 1948, which was later updated in 1969. This, and such other contributions from him are remarkable.

Published in 1999, Interpreting Projective Drawings is a valuable contribution to the field of Psychiatry/Clinical Psychology.

First published in 1972. Routledge is an imprint of Taylor & Francis, an informa company.

The second edition of a comprehensive introduction to machine learning approaches used in predictive data analytics, covering both theory and practice. Machine learning is often used to build predictive models by extracting patterns from large datasets. These models are used in predictive data analytics applications including price prediction, risk assessment, predicting customer behavior, and document classification. This introductory textbook offers a detailed and focused treatment of the most important machine learning approaches used in predictive data analytics, covering both theoretical concepts and practical applications. Technical and mathematical material is augmented with explanatory worked examples, and case studies illustrate the application of these models in the broader business context. This second edition covers recent developments in machine learning, especially in a new chapter on

deep learning, and two new chapters that go beyond predictive analytics to cover unsupervised learning and reinforcement learning.

Edited by Emanuel F. Hammer, New York University, New York, New York. (With 14 Contributors) On its way to becoming the classic in the field of projective drawings, this book provides a grounding in fundamentals and goes on to consider differential diagnosis, appraisal of psychodynamics, conflict and defense, psychological resources as treatment potentials and projective drawing usage in therapy. In addition to Buck's H-T-P Techniques and Machover's Draw-A-Person Test, it also includes the Draw-A-Family Procedure, Harrower's Unpleasant Concept Test, Kinget's Drawing Completion Test, The Draw-A-Person-In-The-Rain Test which elicits clues to the self-concept under conditions of environmental stress, the Draw-An-Animal Concept used to disclose the biological side of the biosocial coin, the Eight Card Redrawing Test which delves into the deepest layers of the subject's psychosexual identification, and free doodles.
