This proceedings volume brings together the invited papers from the Respiratory Biomechanics Symposium of the First World Congress of Biomechanics held in La Jolla, California from August 3D-September 4, 1990. The respiratory system offers many opportunities to apply the different branches of traditional mechanics. Tissue defonnations and stresses during lung expansion can be analyzed using the principles of solid mechanics. Fluid mechanical problems in the lung are unique. There is the matched distribution of two fluids, gas and blood, in two beautifully intertwined, branched conduit systems. The reversing flow of the gas phase presents different problems than the pulsatile flow of the non-Newtonian fluid that is the blood. On the smaller scale, there is the flux of fluids and solutes across the capillary membrane. Finally, there is the problem of coupling fluid and solid mechanics to understand the overall behavior of the respiratory system. In this symposium, we have chosen to address the basic processes that contribute to the gas and fluid exchange functions of the lung. Section 1, Lung Tissue Mechanics, provides an historical background and, then, presents more recent work on the structure of the lung parenchyma, the mechanics of the tissue, and the effects of the bounding membrane, the visceral pleura.

The first edition of this book, published in 1993, received wide acclaim. In this new edition, Dr. Watson and Dr. Gershon are joined by outstanding authorities on the multiple facets of these diseases. This book encompasses the impressive amount of knowledge which has been accumulated in recent years and enriches the knowledge not only about this particular syndrome but about chronic pain in general. It is a valuable contribution to the literature on pain which deals with all the basic scientific information on the acute and chronic stages of herpes zoster as well as the recent exciting developments in the treatment of this affliction.

Discourse markers - the particles oh, well, now, then, you know and I mean, and the connectives so, because, and, but and or - perform important functions in conversation. Dr Schiffrin's approach is firmly interdisciplinary, within linguistics and sociology, and her rigourous analysis clearly demonstrates that neither the markers, nor the discourse within which they function, can be understood from one point of view alone, but only as an integration of structural, semantic, pragmatic, and social factors. The core of the book is a comparative analysis of markers within conversational discourse collected by Dr Schiffrin during sociolinguistic fieldwork. The study concludes that markers provide contextual coordinates which aid in the production and interpretation of coherent conversation at both local and global levels of organization. It raises a wide range of theoretical and methodological issues important to discourse analysis - including the relationship between meaning and use, the role of qualitative and quantitative analyses - and the insights it offers will be of particular value to readers confronting the very substantial problems presented by the search for a model of discourse which is based on what people actually say, mean, and do with words in everyday social interaction.
