Clapperton Mavhunga’s collection of essays about science, technology, and innovation (STI) from an African perspective opens with the idea, "Things do not (always) mean the same from everywhere; when we insist that only ‘our’ meaning is the meaning, we silence other people’s meanings." Mavhunga and his contributors argue that our contemporary definitions of STI are those of countries and cultures that have acquired their dominance of others through global empires, and as a counter to that, Mavhunga seeks to put the concepts of STI into question, exploring what the technological, scientific, and innovative might mean from Africa in lieu of outside introductions or influences. We strongly feel that this book is suited to the Knowledge Unlatched program because of the difficulty of reaching markets and readers in Africa with print books. We feel unlatching would go a long way toward helping Mavhunga reach an important audience for this work that we have been previously unable to reach.

In the spring of 1972, North Vietnam invaded South Vietnam in what became known as the Easter Offensive. Almost all of the American forces had already withdrawn from Vietnam except for a small group of American advisers to the South Vietnamese armed forces. The 23rd ARVN Infantry Division and its American advisers were sent to defend the provincial capital of Kontum in the Central Highlands. They were surrounded and attacked by three enemy divisions with heavy artillery and tanks but, with the help of air power, managed to successfully defend Kontum and prevent South Vietnam from being cut in half and defeated. Although much has been written about the Vietnam War, little of it addresses either the Easter Offensive or the Battle of Kontum. In Kontum: The Battle to Save South Vietnam, Thomas P. McKenna fills this gap, offering the only in-depth account available of this violent engagement. McKenna, a U.S. infantry lieutenant colonel assigned as a military adviser to the 23rd Division, participated in the battle of Kontum and combines his personal experiences with years of interviews and research from primary sources to describe the events leading up to the invasion and the battle itself. Kontum sheds new light on the actions of U.S. advisers in combat during the Vietnam War. McKenna’s book is not only an essential historical resource for America’s most controversial war but a personal story of valor and survival.

Smart phones are just the beginning . . . A tech exec’s New York Times bestselling, groundbreaking analysis of the impact of mobile intelligence. With the perspective of a historian, the precision of a technologist, and the pragmatism of a CEO, Michael J. Saylor of MicroStrategy provides a panoramic view of the future mobile world. He describes how: A Harvard education will be available to anyone with the touch of a screen. Cash will become virtual software and crime proof. Cars, homes, fruit, animals, and more will be tagged so they can tell you about themselves. Buying an item will be as easy as pointing our mobile device to scan and pay. Land and capital will become more of a liability than an asset. Social mobile media will push all businesses to think and act like software companies. Employment will shift as more service-oriented jobs are automated by mobile software. Products, businesses, industries, economies, and even society will be altered forever as the Mobile wave washes over us and changes the landscape. With so much change, The Mobile Wave is a guidebook for individuals, business leaders, and public figures who must navigate the new terrain as mobile intelligence changes everything. “The visionary picture he paints of the future is captivating, informative, and thought-provoking . . . Readers will be able understand and appreciate his clear and engaging exploration of a complex, red-hot, and thoroughly up-to-the minute topic.”—USA Today “A thoughtful romp across invention and innovation.”—Fortune “A blueprint for impending change and a sober warning for the laggards who resist it.”—Forbes.com

One of the greatest challenges faced by designers of digital systems is optimizing the communication and interconnection between system components. Interconnection networks offer an attractive and economical solution to this communication crisis and are fast becoming pervasive in digital systems. Current trends suggest that this communication bottleneck will be even more problematic when designing future generations of machines. Consequently, the anatomy of an interconnection network router and science of interconnection network design will only grow in importance in the coming years. This book offers a detailed and comprehensive presentation of the basic principles of interconnection network design, clearly illustrating them with numerous examples, chapter exercises, and case studies. It incorporates hardware-level descriptions of concepts, allowing a designer to see all the steps of the process from abstract design to concrete implementation. Case studies throughout the book draw on extensive author experience in designing interconnection networks over a period of more than twenty years, providing real world examples of what works, and what doesn't. Tightly couples concepts with implementation costs to facilitate a deeper understanding of the tradeoffs in the design of a practical network. A set of examples and exercises in every chapter help the reader to fully understand all the implications of every design decision.

A CIA analyst’s “revealing and utterly engrossing account” of the world of high-stakes foreign intelligence and her role within the campaign to stop top-tier targets inside Al-Qaida (Joby Warrick). In 1999, 30-year-old Nada Bakos moved from her lifelong home in Montana to Washington, D.C., to join the CIA. Quickly realizing her affinity for intelligence work, Nada was determined to rise through the ranks of the agency first as an analyst and then as a Targeting Officer, eventually finding herself on the frontline of America’s war against Islamic extremists. In this role, Nada was charged with determining if Iraq had a relationship with 9/11 and Al-Qaida, and finding the mastermind behind this terrorist activity: Abu Musab al-Zarqawi. Her team’s analysis stood the test of time, but it was not satisfactory for some members of the Administration. In a tight, tension-packed narrative that takes the reader from Langley deep into Iraq, Bakos reveals the inner workings of the Agency and the largely hidden world of intelligence gathering post 9/11. Entrenched in the world of the CIA, Bakos, along with her colleagues, focused on leading U.S. Special Operations Forces to the doorstep of one of the world’s most wanted terrorists. Filled with on-the-ground insights and poignant personal anecdotes, The Targeter shows us the great personal sacrifice that comes with intelligence work. This is Nada’s story, but it is also an intimate chronicle of how a group of determined, ambitious men and women worked tirelessly in the heart of the CIA to ensure our nation’s safety at home and abroad.
