This is a story of the pioneering of motor transport, beginning at Doncaster in Victoria delivering fruit in the 1940s. After World War 2, Ed Cameron and his brothers were the driving force began regular deliveries of produce from Melbourne to Sydney. They formed the D&E Cameron transport company, to battle the primitive Hume Highway. Frustrated by the inadequacies of the available European and British trucks, Ed found the solution by importing the first Kenworths to Australia. It was through his efforts that Kenworth set up at Bayswater in Victoria, to produce trucks custom- built for Australian long-haul transport conditions. D&E Cameron ceased operations in the 1970s, but the name continues as Ed's son runs the very successful Glen Cameron Group, as one of Australia's leading transport operations. In this book, Ed Cameron tells the Kenworth story against the background of his family history, and the diversity of his interests following his life on the roads.

Travel back in time to the days when dragons abounded. From the era just before Noah's ark, through the battles between dragons and mankind in the time of King Arthur and to the haunting presence of dragons in our day, this stunning prequel reveals the mysteries that led to the best-selling fantasy adventure that began with Raising Dragons. Eye of the Oracle will captivate young and old alike and will challenge every reader to search deep within for answers to the mysteries in their own hearts.

Anyone can recycle a plastic bottle by tossing it into a bin, but it takes a bit of skill to propel it into that bin from 500 feet away. Skill, and a copy of Soda-Pop Rockets. Author and engineer Paul Jarvis has designed 20 different easy-to-launch rockets that can be built from discarded plastic drink bottles. After learning how to construct and fly a basic model, readers will find out new ways to modify and improve their designs, including built-on fins, nosecones, and parachutes that enable a rocket to float safely back to earth. More complex designs include two-, three-, and five-bottle rockets, gliding rockets, long-tail rockets, cluster rockets, whistling rockets, ring-finned rockets, and a jumbo version made from a five-gallon water-cooler tank. Clear, step-by-step instructions with full-color illustrations accompany each project, including how to build a launch pad, along with photographs of the author firing his creations into the sky. For those determined to find an educational benefit to their tinkering, these rockets are a clear demonstration of Newton's Third Law. Soda-bottle rockets can even be used as science fair projects by budding engineers. You don't have to be a rocket scientist to build them, but who knows what career path you'll take after you do?

This is a practical, hands-on guide packed with examples that will help you build rich Drupal 7 media web applications. If you are a Drupal site builder and you wish to spice up your web applications with rich media content, then this book is for you. A basic understanding of HTML, JavaScript, and basic PHP module development in Drupal would be helpful, but is not necessary.

The French Dominican theologian Yves Congar is recognized by many as the most important Roman Catholic ecclesialogist of the 20th century. He was the thinker behind some of the major decrees of the Second Vatican council. He was also a leader in the ecumenical movement in Europe throughout most of the century. Despite his importance, there are few books about Congar in English. Congar's pneumatology, argues Groppe, can enrich various ongoing theological discussions, including reflection as to whether the church should be hierarchical or a democracy, the development of "persons in communion" as a framework for contemporary theological anthropology and ecclesiology, and deliberations about the personhood of the Holy Spirit.
