Focuses on organisational goals and those of other stakeholders and society at large. This book provides an insight into the potential benefits and pitfalls, expectations and concerns of advancing a critical view of HRD in practice. It is intended for lecturers, students and practitioners who are aching for a critical analysis.

Since long before computers were even thought of, data has been collected and organized by diverse cultures across the world. Once access to the Internet became a reality for large swathes of the world's population, the amount of data generated each day became huge, and continues to grow exponentially. It includes all our uploaded documents, video, and photos, all our social media traffic, our online shopping, even the GPS data from our cars. "Big Data" represents a qualitative change, not simply a quantitative one. The term refers both to the new technologies involved, and to the way it can be used by business and government. Dawn E. Holmes uses a variety of case studies to explain how data is stored, analyzed, and exploited by a variety of bodies from big companies to organizations concerned with disease control. Big data is transforming the way businesses operate, and the way medical research can be carried out. At the same time, it raises important ethical issues; Holmes discusses cases such as the Snowden affair, data security, and domestic smart devices which can be hijacked by hackers. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. 'I squeezed through the narrow gap and out into the hallway and I stood for a moment, unable to decide where to go. Should I make a dash for the kitchen, where my mother would be swigging from a bottle? Or should I run upstairs and try to find somewhere to hide? It was a choice I didn't really need to make, because there was no escape' Anna Lowe grows up on the doorsteps of pubs, waiting for her mum to come out. Having to give up her bedroom to her mother's drunken friends. And regularly calling out the ambulance, after finding her mother unconscious and covered in vomit. But it is when they move in with her mother's boyfriend Carl that things take the ugliest turn. Not only is he violent with her mother, but he also sexually abuses Anna from the age of six - destroying any semblance of normal childhood she had left. Wake Up, Mummy is the heartbreaking true story of a little girl who eventually found the courage to break free from the past.

Reflections of Time by Afro-Chicana author/musician Nancy Lorenza Green from El Paso, Texas is a collection of poetry that reflects on how spiritual healing and consciousness raising are agents of social change.

Analyzes Derrida's 1975 seminar "La vie la mort" as a deconstruction of biology with relevance to his work more broadly. In Biodeconstruction,Francesco Vitale demonstrates the key role that the question of life plays in Jacques Derrida's work. In the seminar La vie la mort (1975), Derrida engages closely with the life sciences, especially biology and evolution theory. Connecting this line of thought to his analysis of cybernetics in Of Grammatology, Vitale shows how Derrida develops a notion of biological life as itself a sort of text that is necessarily open onto further articulations and grafts. This sets the stage for the deconstruction of the traditional opposition between life and death, conceiving of death as an internal condition of the constitution of the living rather than being the opposite of life. It also provides the basis for the deconstruction of the rigidly deterministic concept of the genetic program, an insight that anticipates recent achievements of biological research in epigenetics and sexual reproduction. Finally, Vitaleargues that this framework can enrich our understanding of Derrida's late work devoted to political issues, connecting his use of the autoimmunitarian lexicon to the theory of cellular suicide in biology. "This book is extremely interesting and engaging, and provides a very original and timely perspective on Derrida's work. Its greatest strength is bringing together Derrida's "deconstruction" in his analysis of the life sciences under the heading of "biodeconstruction." This term is simple but ingenious, and captures beautifully the material dimension of Derrida's work." " Nicole Anderson, author of Derrida: Ethics Under Erasure

This title provides a theoretically and methodologically new and distinct approach to gender through the frameworks of biopolitics and genealogy, theorising it as a historically specific apparatus of biopower. Through the use of a diverse mix of historical and contemporary documents, the book explores how the problematisation of intersex infant genitalia in 1950s psychiatry propelled the emergence of the gender apparatus in order to socialise sexed individuals into the ideal productive and reproductive subjects of White, middle-class postwar America.

Big Data Analytics Methods unveils secrets to advanced analytics techniques ranging from machine learning, random forest classifiers, predictive modeling, cluster analysis, natural language processing (NLP), Kalman filtering and ensembles of models for optimal accuracy of analysis and prediction.
