It is however been a hot minute since OCT tech was first introduced, and that has since allowed instruments like the Stratus 3000 to age (fairly well in-fact). Of course things that age also depreciate, and that ' s allowed the Stratus 3000 to enter a price point that doesn ' t require a major practice overhaul or a 60-month financing option.

Optical Coherence Tomography is an imaging technique which produces 3D images of the tissues of the eye. The Clinical Guide to Angio-OCT: Non Invasive, Dyeless OCT Angiography presents the principles of Angio-OCT, discusses its clinical possibilities and demonstrates its clinical utility to the everyday OCT user. Divided into eleven chapters, this book covers every aspect of OCT, from new terminology in the field to clinical applications, and a discussion on future ultrahigh speed swept-source OCT Technology, bringing this text firmly up to date. The Clinical Guide to Angio-OCT: Non Invasive, Dyeless OCT Angiography will develop interest in using Angio-OCT in normal clinical work, show the practical clinical utility of this modality in everyday ophthalmology, and help ophthalmologists and technicians to understand this new technique. Key Points Features discussion on current and future technological and scientific Angio-OCT developments Over 100 images and tables Authored by ophthalmology experts from Italy and the US

As we dig, drill, and excavate to unearth the planet 's mineral bounty, the resources we exploit from ores, veins, seams, and wells are gradually becoming exhausted. Mineral treasures that took millions, or even billions, of years to form are now being squandered in just centuries – or sometimes just decades. Will there come a time when we actually run out of minerals? Debates already soar over how we are going to obtain energy without oil, coal, and gas. But what about the other mineral losses we face? Without metals, and semiconductors, how are we going to keep our industrial system running? Without mineral fertilizers and fuels, how are we going to produce the food we need? Ugo Bardi delivers a sweeping history of the mining industry, starting with its humble beginning when our early ancestors started digging underground to find the stones they needed for their tools. He traces the links between mineral riches and empires, wars, and civilizations, and shows how mining in its various forms came to be one of the largest global industries. He also illustrates how the gigantic mining machine is now starting to show signs of difficulties. The easy mineral resources, the least expensive to extract and process, have been mostly exploited and depleted. There are plenty of minerals left to extract, but at higher costs and with increasing difficulties. The effects of depletion take different forms and one may be the economic crisis that is gripping the world system. And depletion is not the only problem. Mining has a dark side – pollution – that takes many forms and delivers many consequences, including climate change. The world we have been accustomed to, so far, was based on cheap mineral resources and on the ability of the ecosystem to absorb pollution without generating damage to human beings. Both conditions are rapidly disappearing. Having thoroughly plundered planet Earth, we are entering a new world. Bardi draws upon the world 's leading minerals experts to offer a compelling glimpse into that new world ahead.

Chandler and Grant's *Glaucoma*--one of the field's seminal texts on the medical practice and surgical management of glaucoma, now in its Sixth Edition--includes the latest updates in an area that is currently experiencing a surge of innovation. Edited by Drs. Malik Y. Kahook and Joel S. Schuman and with contributions from the late David L. Epstein and more than 80 contributors, *Chandler and Grant's Glaucoma, Sixth Edition* brings together the experience of world-class glaucoma experts who belong to a long line of surgeons trained using the teachings of the original authors of this classic work. Each chapter has been meticulously edited and updated from the previous edition, while maintaining the well-established historical teachings of Drs. Paul A. Chandler and W. Morton Grant. New chapters on medical therapy as well as thorough updates on novel and minimally invasive approaches for the surgical management of glaucoma have been added. New topics and features in the Sixth Edition include: Advances in imaging of the optic nerve and retina Rho-associated protein kinase (ROCK) inhibitors Glaucoma and cerebrospinal fluid pressure The US Food and Drug Administration's role in the development of new diagnostic and surgical devices for patients with glaucoma *Chandler and Grant's Glaucoma* has been the most relevant and invaluable reference on glaucoma for generations of ophthalmologists. This updated Sixth Edition builds on the teachings of previous editions, making the Sixth Edition as relevant in the 21st century as when the first lectures were presented by Drs. Chandler and Grant more than 55 years ago.

Thielicke here studies the themes of doubt and appropriation in modern Protestant thought. A leading advocate of dialectical theology, Thielicke examines the work of the great German Protestant religious philosophers from Lessing and Schliermacher through Barth and Tillich, probing these theologians' understanding of their context and how this tradition can impact our own engagement with our times. Clear, finely nuanced, historically and philosophically mature, this is a vital reflection on the history of theology and in systematic theology.
