variables, including how ladder logic diagrams can be derived from traditional schematic circuit diagrams, and the general rules governing their use. Ladder logic is the primary programming language for Programmable Logic Controllers (PLCs). It has following advantages: It is the primary language used in industrial applications, especially for programming PLCs. It is a graphical and visual language, unlike textual high-level languages, such as C, C++, Java and so on. It can be derived from traditional schematic diagrams which can be cumbersome for complicated circuits (for example, relay logic diagrams). It makes use of primitive logic operations like AND, OR and NOT. It can be used where the primary reasons are safety, ease and isolation. For example, for electrical isolation of high-power industrial motors. It has a control behavior. For example, it can be used to control motors,
