"I had nightmares, flashbacks. I dissociated... Changes in self-perception and hallucinations-those are some of my other symptoms. You are poison, I chanted silently to myself. And your poison is contagious." So begins Mac McClelland's powerful, unforgettable memoir, *Irritable Hearts*. When thirty-year-old, award-winning human rights journalist Mac McClelland left Haiti after reporting on the devastating earthquake of 2010, she never imagined how the assignment would irrevocably affect her own life. Back home in California, McClelland cannot stop reliving vivid scenes of violence. She is plagued by waking terrors, violent fantasies, and crippling emotional breakdowns. She can't sleep or stop crying. Her life in shambles, it becomes clear that she is suffering from Post-Traumatic Stress Disorder. Her bewilderment about this sudden loss of control is magnified by the intensity of her feelings for Nico, a French soldier she met in Port-au-Prince and with whom she connected instantly and deeply. With inspiring fearlessness, McClelland tackles perhaps her most harrowing assignment to date: investigating the damage in her own mind and repairing her broken psyche. She begins to probe the depths of her illness, exploring our culture's history with PTSD, delving into the latest research by the country's top scientists and therapists, and spending time with veterans and their families. McClelland discovers she is far from alone: while we frequently associate PTSD with wartime combat, it is more often caused by other manner of trauma and can even be contagious-close proximity to those afflicted can trigger its symptoms. As she confronts the realities of her diagnosis, she opens up to the

love that seems to have found her at an inopportune moment. Irritable Hearts is a searing, personal medical mystery that unfolds at a breakneck pace. But it is also a romance. McClelland fights desperately to repair her heart so that she can give it to the kind, patient, and compassionate man with whom she wants to share a life. Vivid, suspenseful, tender, and intimate, Irritable Hearts is a remarkable exploration of vulnerability and resilience, control and acceptance. It is a riveting and hopeful story of survival, strength, and love.

Organ, James Peek, William Porter, John Sandlos, James A. Schaefer

This completely revised second edition includes new information on biomass in relation to climate change, new coverage of vital issues including the "food versus fuel" debate, and essential new information on "second generation" fuels and advances in conversion techniques. The book begins with a guide to biomass accumulation, harvesting, transportation and storage, as well as conversion technologies for biofuels. This is followed by an examination of the environmental impact and economic and social dimensions, including prospects for renewable energy. The book then goes on to cover all the main potential energy crops.

Mentorship is a catalyst capable of unleashing one's potential for discovery, curiosity, and participation in STEM and subsequently improving the training environment in which that STEM potential is fostered. Mentoring relationships provide developmental spaces in which students' STEM skills are honed and pathways into STEM fields can be discovered. Because mentorship can be so influential in shaping the future STEM workforce, its occurrence should not be left to chance or idiosyncratic implementation. There is a gap between what we know about effective mentoring and how it is practiced in higher education. The Science of Effective Mentorship in STEM studies mentoring programs and practices at the undergraduate and graduate levels. It explores the importance of mentorship, the science of mentoring relationships, mentorship of underrepresented students in STEM, mentorship structures and behaviors, and institutional cultures that support mentorship. This report and its complementary interactive guide present insights on effective programs and practices that can be adopted and adapted by institutions, departments, and individual faculty members.

Aline Leon In the last years, public attention was increasingly shifted by the media and world governments to the concepts of saving energy, reducing pollution, protecting the environment, and developing long-term energy supply solutions. In parallel, research funding relating to alternative fuels and energy carriers is increasing on both national and international levels. Why has future energy supply become such a matter of concern? The reasons are the problems created by the world's current energy supply system which is mainly based on fossil fuels. In fact, the energy stored in hydrocarbon-based solid, liquid, and gaseous fuels was, is, and will be widely consumed for internal combustion engine-based transportation, for electricity and heat generation in residential and industrial sectors, and for the production of fertilizers in agriculture, as it is convenient, abundant, and cheap. However, such a widespread use of fossil fuels by a constantly growing world population (from 2.3 billion in 1939 to 6.5 billion in 2006) gives rise to the two problems of oil supply and environmental degradation. The problem related to oil supply is caused by the fact that fossil fuels are not renewable primary energy sources: This means that since the first barrel of petroleum has been pumped out from the ground, we have been exhausting a heritage given by nature.

For centuries herbs and spices have been an integral part of many of the world's great cuisines. But spices have a history of doing much more than adding life to bland foods. They have been the inspiration for, among other things, trade, exploration, and poetry. Priests employed them in worship, incantations, and rituals, and shamans used them as charms to ward off evil spirits. Nations fought over access to and

monopoly of certain spices, like cinnamon and nutmeg, when they were rare commodities. Not only were many men ' s fortunes made in the pursuit of spices, spices at many periods throughout history literally served as currency. In *Culinary Herbs and Spices of the World*, Ben-Erik van Wyk offers the first fully illustrated, scientific guide to nearly all commercial herbs and spices in existence. Van Wyk covers more than 150 species—from black pepper and blackcurrant to white mustard and white ginger—detailing the propagation, cultivation, and culinary uses of each. Introductory chapters capture the essence of culinary traditions, traditional herb and spice mixtures, preservation, presentation, and the chemistry of flavors, and individual entries include the chemical compounds and structures responsible for each spice or herb ' s characteristic flavor. Many of the herbs and spices van Wyk covers are familiar fixtures in our own spice racks, but a few—especially those from Africa and China—will be introduced for the first time to American audiences. Van Wyk also offers a global view of the most famous use or signature dish for each herb or spice, satisfying the gourmand ' s curiosity for more information about new dishes from little-known culinary traditions. People all over the world are becoming more sophisticated and demanding about what they eat and how it is prepared. *Culinary Herbs and Spices of the World* will appeal to those inquisitive foodies in addition to gardeners and botanists.

This contributed volume contains the selected and reviewed papers of the 2nd Interdisciplinary Conference on Production, Logistics and Traffic (ICPLT) 2015, Dortmund, Germany. The topical focus lies on economic, ecological and societal issues related to commercial transport. The authors are international experts and the paper collection presents the state-of-the-art in the field, thus making this book a valuable read for both practitioners and researchers.
