Wireless Foresight deals with the development of the wireless communications industry and technology during the coming ten to fifteen years. Telecommunications is a global business of enormous proportions and is one of the largest industries in the world. Written in a highly accessible and simple to read manner, this book is based around four scenarios of the wireless world in 2015. The focus is on the industry (i.e. infrastructure and terminal vendors, operators, and service developers and providers) as well as on new players. Discusses the long-term developments described in the four scenarios and also short term issues, for example the challenges facing industry. Uncovers important areas for technological research and discusses the critical challenges facing industry, for example; the high cost for infrastructure, the slow spectrum release, the stampeding system complexity, radiation, battery capacity, and the threat of a disruptive market change facing the telecommunications industry. Offers a global approach whereby developments from around the world are described. Employs the method of building full-scale scenarios as opposed to just identifying trends and making predictions. Wireless Foresight is an invaluable and provocative read for top and middle management, strategists, business developers, technology managers, and entrepreneurs in the telecom, datacom and infocom industries alike. It is also of great interest to financial analysts and academics.

Significantly reduced list price USDA-NRCS. Issued in spiral ringboundbinder. By Philip J. Schoeneberger, et al. Summarizes and updates the current National Cooperative Soil Survey conventions for describing soils. Intended to be both current and usable by the entire soil science community."

NSSC Biology is a course consisting of three Modules, an Answer Book and a Teacher's Guide. The course has been written and designed to prepare students for the Namibia Senior Secondary Certificate (NSSC) Ordinary and Higher Level, or similar examinations. The modules have been developed for distance learners and learners attending schools. NSSC Biology is high-quality support material. Features of the books include: ' modules divided into units, each focusing on a different theme ' stimulating and thought-provoking activities, designed to encourage critical thinking ' word boxes providing language support ' highlighted and explained key terminology ' step-by-step guidelines aimed towards achieving the learning outcomes ' self-evaluation to facilitate learning and assess skills and knowledge ' clear distinction between Ordinary and Higher Level content ' an outcomes-based approach encouraging student-centred learning ' detailed feedback in the Answer Book promoting a thorough understanding of content through recognising errors and correcting them.

This new, fully revised edition aims to serve as a guide for agricultural research scientists and other practitioners in writing papers for publication. It also looks to provide a resource manual for training courses in scientific writing. There are three new chapters on reporting statistical results, communicating science to non-scientific audiences and electronic publishing. In addition, the original chapters have all been rewritten to reflect current developments and to make the content more complete and easily comprehensible.

Environmental education and education for sustainable development have become features of many countries' formal education systems. To date, however, there have been few attempts to explore what such learning looks and feels like from the perspective of the learners. Based on in-depth empirical studies in school and university classrooms, this book presents rich insights into the complexities and dynamics of students' environmental learning. The authors show how careful analysis of students' environmental learning experiences can provide powerful pointers for future practice, policy and research. Environmental Learning will be a key resource for educators, teacher educators, decision-makers and researchers involved in education and sustainable development.

This book gives emphasis to wood fiber raw materials, alternative sources of fibers for paper production, environmental issues, paper quality improvement and cost of paper production. Varieties of non-wood raw materials, including kenaf, rice straw, empty fruit bunches of palm trees, bamboo, bagasse, etc., are considered in this book. The process of fiber treatment also varied to meet paper quality improvement. Different organosolv processes of fiber treatment are discussed. Considering contemporary issues, one particular chapter analyzes the environmentally friendly way of processing non-wood fibers for paper production. The book also contains a chapter on the by-product raw materials of paper production and their profitable applications.

Performance of Bio-based Building Materials provides guidance on the use of bio-based building materials (BBBM) with respect to their performance. The book focuses on BBBM currently present on the European market. The state-of-the-art is presented regarding material properties, recommended uses, performance expectancies, testing methodology, and related standards. Chapters cover both 'old and traditional' BBBM since quite a few of them are experiencing a comeback on the market. Promising developments that could become commercial in the near future are presented as well. The book will be a valuable reference resource for those working in the bio-based materials research community, architects and agencies dealing with sustainable construction, and graduate students in civil engineering. Takes a unique approach to bio-based materials and presents a broad overview of the topics on relevant areas necessary for application and promotion in construction. Contains a general description, notable properties related to performance, and applications. Presents standards that are structured according to performance types.
