We don't have an energy crisis. We have

a consumption crisis. And this book,  
which takes aim at cherished assumptions  
regarding energy, offers refreshingly  
straight talk about what's wrong with the  
way we think and talk about the problem.  
Though we generally believe we can solve  
environmental problems with more  
energy—more solar cells, wind turbines,

and biofuels—alternative technologies  
come with their own side effects and  
limitations. How, for instance, do solar  
cells cause harm? Why can't engineers  
solve wind power's biggest obstacle?  
Why won't contraception solve the  
problem of overpopulation lying at the  
heart of our concerns about energy, and

what will? This practical, environmentally informed, and lucid book persuasively argues for a change of perspective. If consumption is the problem, as Ozzie Zehner suggests, then we need to shift our focus from suspect alternative energies to improving social and political fundamentals: walkable communities,

improved consumption, enlightened  
governance, and, most notably, women's  
rights. The dozens of first steps he offers  
are surprisingly straightforward. For  
instance, he introduces a simple sticker  
that promises a greater impact than all of  
the nation's solar cells. He uncovers why  
carbon taxes won't solve our energy

As oil insecurity deepens, the extraction risks of fossil fuels rise, and concerns about climate instability cast a shadow over the future of coal, a new world energy economy is emerging. The old economy, fueled by oil, natural gas, and coal is being replaced with one
