Includes a foreword by Major General David A. Rubenstein. From the editor: "71F, or "71 Foxtrot," is the AOC (area of concentration) code assigned by the U.S. Army to the specialty of Research Psychology. Qualifying as an Army research psychologist requires, first of all, a Ph.D. from a research (not clinical) intensive graduate psychology program. Due to their advanced education, research psychologists receive a direct commission as Army officers in the Medical

Service Corps at the rank of captain. In terms of numbers, the 71F AOC is a small one, with only 25 to 30 officers serving in any given year. However, the 71F impact is much bigger than this small cadre suggests. Army research psychologists apply their extensive training and expertise in the science of psychology and social behavior toward understanding, preserving, and enhancing the health, well being, morale, and performance of Soldiers and military families. As is clear throughout the pages of this book, they do this in many ways and in many areas, but always with a scientific approach. This is

the 71F advantage: applying the science of psychology to understand the human dimension, and developing programs, policies, and products to benefit the person in military operations. This book grew out of the April 2008 biennial conference of U.S. Army Research Psychologists, held in Bethesda, Maryland. This meeting was to be my last as Consultant to the Surgeon General for Research Psychology, and I thought it would be a good idea to publish proceedings, which had not been done before. As Consultant, I'd often wished for such a document to help explain to people what it is that Army

Research Psychologists "do for a living." In addition to our core group of 71Fs, at the Bethesda 2008 meeting we had several brand-new members, and a number of distinguished retirees, the "grey-beards" of the 71F clan. Together with longtime 71F colleagues Ross Pastel and Mark Vaitkus, I also saw an unusual opportunity to capture some of the history of the Army Research Psychology specialty while providing a representative sample of current 71F research and activities. It seemed to us especially important to do this at a time when the operational demands on the Army and the total

force were reaching unprecedented levels, with no sign of easing, and with the Army in turn relying more heavily on research psychology to inform its programs for protecting the health, well being, and performance of Soldiers and their families."

Jobs that were once well-defined are now multifaceted. New realities have placed a premium on employee cognitive processing to fulfill complex occupational roles. But human conscious cognitive capacity is limited, making it nearly impossible for employees to keep up without being overloaded. Stajkovi?

and Sergent refute the common assumption that technological automation is the only way forward. Instead, they directly tackle the issue of employee cognitive overload by proposing cognitive automation as an alternative solution. The authors present a sampling of cutting-edge research showing that conscious guidance is not required for all goal pursuits; goal-directed behavior at work can be automated via priming of subconscious goals. Building on research in social psychology and organizational behavior, Stajkovi? and Sergent introduce four models to explain how subconscious goals

are primed in organizations: •Auto-motive model: Repeated practice with a goal makes cognitive automation possible. •Goal contagion: Observing and inferring goals of others creates cognitive automation. •Means-goal priming: Confidence in your goal pursuit enhances cognitive automation. •A history of reinforcement: Money, feedback, and social recognition used to reinforce goal achievement become associated with the goal, resulting in cognitive automation. The authors canvas a broad range of knowledge concerning the problem of employee cognitive overload in contemporary organizations and

rely on multidisciplinary research to propose cognitive automation as a solution that can address it directly. This book is a deep well of valuable information for those interested in solving real work problems with application of science of organizational behavior (SOB).

This book examines numerous topic areas that are considered to be especially relevant for making a strategic leader development investment. The topics covered are areas that have theoretical and empirical connections to important aspects of growth, change, adult development, and underlying abilities, skills, and competencies needed to lead effectively in times of great complexity. In

Online Library Place Advantage Applied Psychology For Interior Architecture

addition, these are investment areas identified by the U.S. Army--a world-class organization faced with the need for radical transformation--as particularly relevant for success and survival. This book identifies key concerns in developing leaders and leadership, and in transforming organizations to better meet the challenges of a complex world. There are two aspects of this book that distinguish it from the numerous existing volumes on leadership in the scholarly and popular-press literatures. Most important, the overarching focus of the present book is on development. There are

Online Library Place Advantage Applied Psychology For Interior Architecture

many offerings on the topic of leadership, but relatively few that focus on leader development--especially from a scholarly, academic perspective. Also, this volume offers a unique perspective in examining those underlying psychological competencies and processes that are viewed as especially relevant for leader development. The chapters that are collected in this edited volume were originally commissioned by the U.S. Army Research Institute as "white papers" to better help Army officers and researchers understand important issues in leader development. The present organization of the

papers is around four central themes: a) Accelerating Leader Development, b) Cognitive Skills Development, c) Developing Practical and Emotional Intelligence, and d) Enhancing Team Skills.

Applied Psychology: Putting theory into practice demonstrates how psychology theory is applied in the real world. Uniquely structured as a series of themed 'rooms', it is as novel and engaging as it is essential reading for student mapping a career in psychology.
