The existence of man has been associated  
closely with the culture and care plants.

The early man who gathered fruits, seeds

and nuts started to raise crop by culturing and maintaining the crop for future use. Crop production however, began when domestication of crop became essential to supplement natural resources. Crop production in agriculture is an art as well as science of cultivating land for the controlled production of plants and plant

materials which are of use to man even animals. Being an art, it requires certain field work which needs skill, constant practice and technical-know-how.

Principles of crop production however, are the scientific theories, ways, methods and rules of producing crops. It involves basic factors, theories, cultural operations and

practices that governed crop production in terms of growth, development and yield. Crop production however, may be defined as a branch of plant science that deals with both theories and practical way of growing those plants that play important role in man's existence, being that plants are the major sources (either directly or

The first half of the book deals with the underlying principles of production, supply and demand. These are essential

tools for the study and management of the agricultural sector and food markets. In the second half, supply and demand are brought together into a chapter of equilibrium and exchange. This is followed by chapters on trade and the theory of economic welfare. In the final chapter it is shown that much of the

principles of evolution and natural selection. R. Ford Denison shows how both biotechnology and traditional plant breeding can use Darwinian insights to identify promising routes for crop genetic improvement and avoid costly dead ends. Denison explains why plant traits that have been genetically optimized by

individual selection--such as photosynthesis and drought tolerance--are bad candidates for genetic improvement.

Traits like plant height and leaf angle, which determine the collective performance of plant communities, offer more room for improvement.

Agriculturalists can also benefit from
