Research Question: How will the use of a graphic organizer affect the overall cohesiveness of sixth grade students' essay writing? Research Activities: The focus of this intervention was to teach students how to use a graphic organizer as a tool to provide structure and organization while writing a problem and solution essay, a genre of writing required by the California Content Standards for sixth grade. Context: This intervention took place in a 6th grade, self-contained classroom with 29 students. Methods and Data: The intervention spanned three consecutive weeks and took 14 days to implement. First, students were introduced to the graphic organizer and created a problem and solution essay as a whole class. Then students used the graphic organizer to create their own problem and solution essay related to a curricular novel. Finally, students used the graphic organizer to write a problem and solution essay on a topic of their choice. Data sets include students' essays before and after having used the graphic organizer. Organization was measured by a rubric score and the "overall cohesiveness" of the essay. An essay was scored as "Cohesive" if it had one main idea, stuck to that main idea throughout the essay, and if information was presented in a logical order. Also, attitudinal data includes teacher notes from a class discussion about writing before and after the intervention. Results: Overall, students' essay organization improved. About 79% of the post-intervention

The 4th edition of the Handbook of Research on Educational Communications and Technology expands upon the previous 3 versions, providing a comprehensive update on research pertaining to new and emerging educational technologies. Chapters that are no longer pertinent have been eliminated in this edition, with most chapters being completely rewritten, expanded, and updated. Additionally, new chapters pertaining to research methodologies in educational technology have been added due to expressed reader interest. Each chapter now contains an extensive literature review, documenting and explaining the most recent, outstanding research, including major findings and methodologies employed. The Handbook authors continue to be international leaders in their respective fields; the list is cross disciplinary by design and great effort was taken to invite authors outside of the traditional instructional design and technology community.

What is a rubric? A rubric is a coherent set of criteria for student work that describes levels of performance quality. Sounds simple enough, right? Unfortunately, rubrics are commonly misunderstood and misused. The good news is that when rubrics are created and used correctly, they are strong tools that support and enhance classroom instruction and student learning. In this comprehensive guide, author Susan M. Brookhart identifies two essential components of effective rubrics: (1) criteria that relate to the learning (not the "tasks") that students are being asked to demonstrate and (2) clear descriptions of performance across a continuum of quality. She outlines the difference between various kinds of rubrics (for example, general versus task-specific, and analytic versus holistic), explains when using each type of rubric is appropriate, and highlights examples from all grade levels and assorted content areas. In addition, Brookhart addresses \* Common misconceptions about rubrics; \* Important differences between rubrics and other assessment tools such as checklists and rating scales, and when such alternatives can be useful; and \* How to use rubrics for formative assessment and grading, including standards-based grading and report card grades. Intended for educators who are already familiar with rubrics as well as those who are not, this book is a complete resource for writing effective rubrics and for choosing wisely from among the many rubrics that are available on the Internet and from other sources. And it makes the case that rubrics, when used appropriately, can improve outcomes by helping teachers teach and helping students learn.

This text addresses the problem of the overuse of standardized testing. It argues that so-called test-based reform has given rise to the "cram curriculum" and turned schools into test-prep centres. Overlooked are teachers, who observe students, and are the primary source of information on learning.
