China's position in the world has been evolving. It seeks increased influence and independence from foreign powers with the ultimate goal of preserving China's sovereignty, independence, territorial integrity, and political system. Over the long term, China seeks to transform the international system to better suit its interests, but seeks to integrate itself into the existing international system over the short term with the goal of reshaping the Asia-Pacific political environment into one in which its interests must be given greater attention. China's pursuit of space power is intended to support this strategy. China views the development of space power as a necessary move for a country that wants to strengthen its national power. Indeed, China's goal is to become a space power on par with the United States and to foster a space industry that is the equal of those in the United States, Europe, and Russia. China takes a comprehensive, long-term approach to this goal that emphasizes the accrual of the military, economic, and political benefits space can provide.

In *Works and Days*, one of the two long poems that have come down to us from Hesiod, the poet writes of farming, morality, and what seems to be a very nasty quarrel with his brother Perses over their inheritance. In this book, Anthony T. Edwards extracts from the poem a picture of the social structure of Ascra, the hamlet in northern Greece where Hesiod lived, most likely during the seventh century b.c.e. Drawing on the evidence of trade, food storage,

reciprocity, and the agricultural regime as Hesiod describes them in *Works and Days*, Edwards reveals Ascra as an autonomous village, outside the control of a polis, less stratified and integrated internally than what we observe even in Homer. In light of this reading, the conflict between Hesiod and Perses emerges as a dispute about the inviolability of the community's external boundary and the degree of interobligation among those within the village. Hesiod's Ascra directly counters the accepted view of *Works and Days*, which has Hesiod describing a peasant society subordinated to the economic and political control of an outside elite. Through his deft analysis, Edwards suggests a new understanding of both *Works and Days* and the social and economic organization of Hesiod's time and place.

Highly skilled experimenters present key techniques for the multidisciplinary study of inflammation in such conditions as inflammatory bowel disease, rheumatoid arthritis, renal disease, and cardiovascular disease. Described in step-by-step detail to ensure experimental success, the techniques are focused on the research and development of potential new antiinflammatory drugs in active target areas. The protocols are suitable for many current areas of drug discovery research, including transcription factors, cytokines, adhesion molecules, cyclooxygenase-2 (COX-2) inhibitors, free radicals, nitric oxide synthases, angiogenesis, wound healing, complement activation, immune rejection, and metalloproteinases..

Mesenchymal stem cell-derived exosomes are at the forefront of research in two of the most high profile and funded scientific areas – cardiovascular research and stem cells. *Mesenchymal Stem Cell Derived Exosomes* provides insight into the biofunction and molecular mechanisms, practical tools for research, and a look toward the clinical applications of this exciting phenomenon which is emerging as an effective diagnostic. Primarily focused on the cardiovascular applications where there have been the greatest advancements toward the clinic, this is the first compendium for clinical and biomedical researchers who are interested in integrating MSC-derived exosomes as a diagnostic and therapeutic tool.
