This book examines the ways in which the theory and data of social psychology can be applied to teaching, learning, and other experiences in schools. Its focus ranges in level from the individual (e.g., student attitudes and attributions), to the teacher-student interaction, to the impact of society (e.g., racial and cultural influences on school performance). The editor and distinguished contributors have two major purposes. The first is to illustrate the scope and sophistication of the emerging field known as the social psychology of education. The second is to provide solid, informed suggestions to educators for the amelioration of current educational problems. To that end, each author explicitly discusses implications for educational practice.

Planned, developed and written by practising classroom teachers with a wide variety of experience in schools, this maths course has been designed to be enjoyable and motivating for pupils and teachers.
