The aim of this book is to provide the target audience, specifically students of Medicine, Biology, Systems Biology and Bioinformatics, as well as experienced researchers in research fields relevant to metabolic syndrome (MetS) with an overview of the challenges and opportunities in systems biology and how it can be used to tackle MetS. In particular, the aims are: (1) to provide an introduction to the key biological processes involved in the pathophysiology of MetS, (2) through the use of specific examples, provide an introduction to the latest technologies that use a systems biology approach to study MetS, and (3) to give an overview of the mathematical modeling approaches for studying MetS. The clearly written chapters by leading experts in the field provides detailed descriptions crucial for the unique position of this book and its focus on the application of systems biology to tackle specific pathophysiologically relevant aspects of MetS and provides a valuable practical guide to this research community.

Have you ever wanted to read the Bible, but every time you open it up to try it just doesn't make sense? BookCaps is here to help with this translation of the Gospels (Matthew, Mark, Luke and John) in modern English. This translation is based on the King James Version. It contains both a comparative version of each version and a standalone version of the modern translation. We all need refreshers every now and then. Whether you are a student trying to cram for that big final, or someone just trying to understand a book more, BookCaps can help. We are a small, but growing company, and are adding titles every month.

The perfect gift for boys and men called Maxson. Are you looking for a special gift for a loved person or someone close to you? This funny Shark Notebook / Journal, name personalized, is perfect to write down everything comes in mind - use it for your brilliant ideas, as a to-do list, for phone numbers, for saving your memories, as a diary or planner. This amazing write in Notebook with Shark Theme creates great moments whether in kindergarten, school or the office. Your new notebook: high-quality cover great themed design personalized shark name 110 pages blank white paper, ruled 6 x 9 inch size This cool Notebook is perfect for: Birthday Gifts Christmas Gifts Name Day Gift Co-worker & Boss Gift Back To School Gift 100 Days Of School Gift Student Gifts College & School Supplies Kindergarten & Preschool Supplies Shark Party Supplies and many more Find other Names and click on the Authors Name.

Metabolomics, the global characterisation of the small molecule complement involved in metabolism, has evolved into a powerful suite of approaches for understanding the global physiological and pathological processes occurring in biological organisms. The diversity of metabolites, the wide range of metabolic pathways and their divergent biological contexts require a range of methodological strategies and techniques. Methodologies for Metabolomics provides a comprehensive description of the newest methodological approaches in metabolomic research. The most important technologies used to identify and quantify metabolites, including nuclear magnetic resonance and mass spectrometry, are highlighted. The integration of these techniques with classical biological methods is also addressed. Furthermore, the book presents statistical and chemometric methods for evaluation of the resultant data. The broad spectrum of topics includes a vast variety of organisms, samples and diseases, ranging from in vivo metabolomics in humans and animals to in vitro analysis of tissue samples, cultured cells and biofluids.

With the explosion in the quantity of on-line text and multimedia information in recent years, there has been a renewed interest in automatic summarization. This book provides a systematic introduction to the field, explaining basic definitions, the strategies used by human summarizers, and automatic methods that leverage linguistic and statistical knowledge to produce extracts and abstracts. Drawing from a wealth of research in artificial intelligence, natural language processing, and information retrieval, the book also includes detailed assessments of evaluation methods and new topics such as multi-document and multimedia summarization. Previous automatic summarization books have been either collections of specialized papers, or else authored books with only a chapter or two devoted to the field as a whole. This is the first textbook on the subject, developed based on teaching materials used in two one-semester courses. To further help the student reader, the book includes detailed case studies, accompanied by end-of-chapter reviews and an extensive glossary Audience: students and researchers, as well as information technology managers, librarians, and anyone else interested in the subject.

The objective of this Atlas is to contribute to the knowledge of morphological findings of the main cardiovascular diseases among the various specialists who deal with people affected of heart diseases: cardiologists and cardiovascular surgeons, clinical and forensic pathologists, coroners, sports medicine doctors. The interest in cardiovascular pathology, neglected for years in many countries, is increasing worldwide and we are witnessing the revitalization of a discipline, which, in collaboration with clinicians, is making great contributions to the fight against heart diseases and sudden-unexpected deaths. This atlas of cardiovascular diseases is the result of close collaboration between Spanish specialists in cardiology and in cardiovascular pathology and describes the clinical and pathologic features (gross and histopathological) of major cardiovascular diseases in adults, especially those acquired, but also treat relevant congenital anomalies. This book contains 635 images, 78 tables and graphics distributed in 12 chapters across the spectrum of diseases that can be found in each of the structures of the cardiovascular system (aorta, pulmonary vessels, coronaries, valves, myocardium, pericardium and conduction system). The coordinated work of forensic pathologists from different cities in Spain and cardiologists (primarily from the Hospital Universitario Puerta de Hierro de Madrid) has assembled in all chapters their two worlds (forensic pathology and cardiology) to achieve a practical work with the aim to serve as a practical tool for multiple specialists.

Having just broken out of a juvenile detention facility, Aiden and Meg live a life on the run while trying to find evidence that will free their parents from a life sentence in prison.

The book presents the overview of the current knowledge in some fields of vascular biology, addressing cellular and molecular aspects of blood-vessel formation and their role in health and disease. The major factors involved in the formation of blood vessels are presented by scientists actively involved in this area of research. Special emphasis is put on the presentation of various molecular mechanisms not addressed in similar works to date. The book is divided into three parts. The first part describes the cells and mediators in angiogenesis. The significance of various populations of potential endothelial progenitors is particularly highlighted. The chapters of the second part focus on molecular mechanisms, with special emphasis on the role of hypoxia, gasotransmitters and reactive oxygen species as well as microRNAs in regulation of angiogenic processes. In the third part, the pathological aspects of disturbed – aggravated or impaired – vascularization are discussed and new modalities for potential therapies are presented. The book is intended for scientists and PhD students in the fields of vascular biology and cancer research. It may be of interest for medical professionals in the fields of cardiovascular disease, diabetes, oncology and rheumatoid arthritis.
