This book is a quick and easy-to-use reference guide for choosing plant material for landscape designs. This reference manual includes comprehensive lists with search criteria for each of the major plant groups, including trees, shrubs, groundcovers, perennials, vines, grasses, and ferns. These plant groups contain hundreds of specific species, varieties, and cultivars that are readily available in the marketplace from the major production nurseries. Landscape architects, designers, contractors, or anyone who designs with plants, can easily choose plants that will work on their site. The book is technical enough for the professional, yet simple enough to be used by the layperson. Both botanical and common names are used and an extensive amount of cultural and environmental information is presented. While many other books of this kind give only basic information such as sun/shade, height/width, there are so many as 30 specific categories for each plant group. The categories cover such important criteria as light and soil requirements, zone hardiness, height and width, pest and disease susceptibility, urban tolerance, and tolerance to salt and drought. The lists also include many criteria often overlooked such as growth rates, overall messiness, root systems, minimal fall clean up, maintenance levels, soil PH and landscape value/use, and many visual characteristics such as texture, foliage color and fall colors, bloom colors and seasons, shapes and forms, attractive bark and foliage and more. There is also a candid Pros & Cons section covering some realistic considerations for each of the plant species groups.

The guru of earth ponds explains how to site, design, shape, and plant these beloved fixtures of rural landscapes--and make them fit your property and your life. In the decades since he wrote his acclaimed *Earth Ponds*, Tim Matson has designed scores of ponds, each unique to its site and its owners. In *Landscaping Earth Ponds*, he shares what he has learned to make these captivating ponds truly fit into their landscapes and into the lives and lifestyles of their owners. Ponds have long been valued for their charm and utility: how else can you simultaneously enliven your landscape, create recreational opportunities, help the environment, and increase your property value? Earth ponds are increasingly recognized for the full range of gardening, landscaping, and ecological promise they hold. As pond-building methods have been perfected, more homeowners are restoring existing ponds or digging new ones. With dozens of color photographs, Matson shows you how to site a pond in right relation to your house, offering surprisingly simple ways to visually link the two. His proven methods and designs reflect the many moods water evokes. Screen your pond for privacy, create a sandy beach and natural diving platform, encourage wetland gardens, line the shores with moisture-loving perennials, or design your gardens and paths to create a sense of mystery and adventure.
