Abraham H. Maslow was one of the foremost spokespersons of humanistic psychology. In *The Farthest Reaches of Human Nature*, an extension of his classic *Toward a Psychology of Being*, Maslow explores the complexities of human nature by using both the empirical methods of science and the aesthetics of philosophical inquiry. With essays on biology, synergy, creativity, cognition, self-actualization, and the hierarchy of needs, this posthumous work is a wide-ranging synthesis of Maslow's inspiring and influential ideas.

Papers on health, creativeness, values, education, society, cognition, metamotivation as well as psychology of being.

The universe has direction, we ourselves have direction. There is meaning in the movement, intrinsic value in the embrace. As Emerson put it, we lie in the lap of immense intelligence, which by any other name is Spirit. There is a theme inscribed on the original face of the Kosmos. There is a pattern written on the wall of Nothingness. There is a meaning in its very gesture, a grace in it s every glance. We-and all beings as such-are drenched in this meaning, afloat in a current of care and profound value, intimate significance, intrinsic awareness. We are part and parcel of this immense intelligence, this Spirit-in-action, this God-in-the-making. We don't have to think of God as some mystic figure outside of the display, running the show. Nor must we picture it as some merely immanent Goddess, lost in the forms of her own production. Evolution is both God and Goddess, transcendent and immanence. It is immanent in the process itself, woven into the very fabric of the kosmos: but it everywhere transcends it own productions, and brings forth anew in every moment. We are invited, I believe, to awaken as this process. The very Spirit in us is invited to become self-conscious, or even, as some would say, superconscious. Depth increases from subconscious to self-conscious to superconscious, on the way to it own shocking recognition, utterly one with the radiant All, and we awaken as that oneness. Maybe the evolutionary sequence really is from matter to body to mind to soul to spirit, each transcending and including, each with a greater depth and greater consciousness and wider embrace. And in the highest reaches of evolution, maybe, just maybe, an individual's consciousness does indeed touch infinity-a total embrace of the entire Kosmos-a Kosmic consciousness that is Spirit awakened to its own true nature. I think the sages are the growing tip of the secret impulse of evolution. I think they are the leading edge of the self-transcending drive that always goes beyond what went before. I think they embody the very drive of the Kosmos toward greater depth and expanding consciousness. I think they are riding the edge of a light beam racing toward a rendezvous with God. And I think they point to the same depth in you, and in me and the all of us. I think they are plugged into the All, and the Kosmos sings through their voices, and Spirit shines through their eyes. And I think they disclose the face of tomorrow, they open us to the heart of our own destiny, which is also already right now in the timelessness of this very moment, and in that startling recognition the voice of the sages becomes your voice, and eyes of the sage becomes your eyes, your speak with tongues of angles and are alight with fire of the realization that never dawns or ceases, you recognize your one true face in the mirror of the kosmos itself: your identity is indeed the All, and your are no longer part of the that stream, your are that stream, with the All unfolding not around you but in you. The stars no longer shine our there, but in here. Supernovas come into being within your heart, and the sun shines inside your awareness. Because you transcend all, you embrace all. There is not final Whole here, only an endless process, and you are the opening or the clearing or the pure Emptiness in which the entire process unfolds- ceaselessly, miraculously, everlastingly, lightly. The whole game is undone, this nightmare of evolution, and you are exactly where you were prior to the beginning of the whole show. With a sudden shock of the utterly obvious, you recognize your own Original Face, the face you had prior to the Big Bang, the face of utter Emptiness that smiles as all creation and sings the entire Kosmos-and it is all undone in that primal glance, and all that is left is the smile, and the reflection of the moon on a quiet pond, late on a crystal clear night. (Ken Wilber, 1996. *A Brief History of Everything*, p. 42)

Ressourcement Theology: A Sourcebook offers a collection of texts previously unavailable in English from leading Dominicans and Jesuits, who initiated a movement for renewal that contributed to the reforms of the Second Vatican Council. In the last decade, theologians have undertaken a serious reappraisal of the contribution of Ressourcement theology to 20th century theology in the Catholic tradition and beyond. This 'return to Ressourcement' has resulted in many of the principal texts being translated into English and (re-)issued, ensuring their accessibility to scholars across the globe. Despite this, many of the earliest documents relating to the history of Ressourcement theology are unavailable to most English-speaking scholars, as they are largely journal articles and book chapters published in French. Patricia Kelly has selected the most significant texts that so far have been unavailable in English, including the controversial piece by Jean-Marie LeBlond ('The Analogy of Truth') that was condemned in the 1950s by the Vatican, as well as the response to Labourdette's attack on LeBlond, penned anonymously by a group of Jesuits. All of these documents will help students and scholars to engage deeply with the history of the Ressourcement movement and its relevance for the developments of the Catholic tradition.

Explores black women writers ' treatment of the ancestor figure. The *Grass That Reaches beyond the Grave* investigates the treatment of the ancestor figure in Toni Cade Bambara ' s *The Salt Eaters*, Paule Marshall ' s *Praisesong for the Widow*, Phyllis Alesia Perry ' s *Stigmata* and A Sunday in June, Toni Morrison ' s *Beloved*, Tananarive Due ' s *The Between*, and Julie Dash ' s film, *Daughters of the Dust* in order to understand how they draw on African cosmology and the interrelationship of ancestors, elders, and children to promote healing within the African American community. Venerica K. Patton suggests that the experience of slavery with its concomitant view of black women as " natively dead " has impacted African American women writers ' emphasis on elders and ancestors as they seek means to counteract notions of black women as somehow disconnected from the progeny of their wombs. This misperception is in part addressed via a rich kinship system, which includes the living and the dead. Patton notes an uncanny connection between depictions of elder, ancestor, and child figures in these texts and Kongo cosmology. These references suggest that these works are examples of Africanisms or African retentions, which continue to impact African American culture.

How sex is rewiring your brain—for good and for bad What does a three-pound brain have to do with one ' s sex life? A lot, actually. Hooked is about what ' s happening to your brain when you ' re having sex. With scientific data put in layman ' s terms, this book demonstrates that: Sexual activity releases chemicals in the brain, creating emotional bonds between partners. This is great news for marriages! Once formed, however, breaking these bonds can have damaging effects on the brain such as depression and difficulty bonding with someone else in the future. The continual forming and breaking of these bonds can have permanent effects on a person ' s brain. PLUS! This updated edition also includes a brand new chapter about the effects of pornography on the brain. All this data about bonding, sex, and pornography has important implications in a casual sex culture. Regardless of what we wish were true, the facts tell us " safe sex " isn't as safe as it seems. Learn about your brain, the positive effects of sex within permanently committed relationships, and how you can protect yourself (especially your brain) from the dangers of casual sex.

Jung ' s lectures on the history of psychology—in English for the first time Between 1933 and 1941, C. G. Jung delivered a series of public lectures at the Swiss Federal Institute of Technology (ETH) in Zurich. Intended for a general audience, these lectures addressed a broad range of topics, from dream analysis to yoga and meditation. Here for the first time in English are Jung ' s lectures on the history of modern psychology from the Enlightenment to his own time, delivered in the fall and winter of 1933 – 34. In these inaugural lectures, Jung emphasizes the development of concepts of the unconscious and offers a comparative study of movements in French, German, British, and American thought. He also gives detailed analyses of Justinus Kerner ' s *The Seeres of Prevorst* and Th é odore Flournoy ' s *From India to the Planet Mars*. These lectures present the history of psychology from the perspective of one of the field ' s most legendary figures. They provide a unique opportunity to encounter Jung speaking for specialists and nonspecialists alike and are the primary source for understanding his late work. Featuring cross-references to the Jung canon and explanations of concepts and terminology, *History of Modern Psychology* painstakingly reconstructs and translates these lectures from manuscripts, summaries, and recently recovered shorthand notes of attendees. It is the first volume of a series that will make the ETH lectures available in their entirety to English readers.
