The Songs of Distant Earth (1986), being a Later Clarke, is not so long on plot as it is on ideas – though since he was no mere fictioneer they're beautifully-observed ideas, naturally.

The Songs of Distant Earth is a very thoughtful science fiction novel. It's not chock full of chases and weird experiments or other derring-do, but it keeps the reader involved and more importantly it makes the reader think. It is a good example of what is known as "hard science fiction."

Songs of Distant Earth by Mike Oldfield is also such an album, it is hard to pick out individual tracks as the album must be listened to throughout and judged on its enirety. It would be easy to dismiss parts of it as derivative Oldfield, but that is missing the point, yes some of it does sound a little like Voyager or Tubular Bells III but I do not see that as a bad thing, he has taken those ...

Songs of Distant Earth, however, has a very nice, steady character - not too serious and heavy, not too light and cheerful. Apart from being true listening music (i.e. that's all one does - sit with a glass of something and enjoy the music) it also makes nice evening/ background/ candle-lit dinner music. 10 people found this helpful

Earth refugees threaten a peaceful space settlement in this influential novel from the Golden Age science fiction author of 2001: A Space Odyssey. More than two thousand years in the future, a small human colony thrives on the ocean paradise of Thalassa—sent there centuries ago to continue the human race before Earth’s destruction. Thalassa’s resources are vast—and the human colony has lived a bucolic life there. But their existence is threatened when the spaceship Magellan arrives on their world—carrying one million refugees from Earth, fleeing the dying planet. Reputed to be Arthur C. Clarke’s favorite novel, The Songs of Distant Earth addresses several fascinating scientific questions unresolved in their time—including the question of why so few neutrinos from the sun have been measured on Earth. In addition, Clarke presents an inventive depiction of the use of vacuum energy to power spacecraft—and the technical logistics of space travel near the speed of light. “Clarke’s simple, musical style never falters in this sobering yet far from bleak commentary on humanity’s longing for the stars. Highly recommended.” —Library Journal

The Oxford Bookworms Library offers new editions of the original Oxford Bookworms Black and Green series, merging the two series into one with new covers. Each new edition builds on the success of the original series and provides enhanced teaching support.

The countdown to doomsday began with the discovery in 1956 of the neutrino, a particle with no mass and no charge. By the year 2001, the significance of this phantom particle was understood: it was a harbinger. A cosmic event was imminent, and would be close enough to touch. Soon the Sun would go nova; the demolition of Earth was assured. And so it happened in the year 3620. Over the centuries of knowing the end was at hand, humanity pulled together to launch probes into space. Primitive ships, at first, carrying embryos to distant systems, relying on machines to incubate and rear the first people of a virgin land beneath an alien sun. On Earth the Lords of the Last Days lived with no need to care for the future of the world; it was the wildest of times, and the saddest. Last to leave was the Magellan carrying a million homeless; when cataclysm struck, its voyagers witnessed through telescopes the death of Earth and all its wonders, saw the Atlantic boil dry, the pyramids disintegrate, the land of Antarctica briefly bare of ice before fire consumed everything. Then the million slept. Five hundred years later, the Magellan must make planetfall to repair its quantum drive. Its sleepe

Six decades of fascinating stories from the legendary “colossus of science fiction” and creator of 2001: A Space Odyssey gathered in one compendium (The New Yorker). Arthur C. Clarke, along with H. G. Wells, Isaac Asimov, and Robert A. Heinlein, was a definitive voice in twentieth century science fiction. A prophetic thinker, undersea explorer, and “one of the true geniuses of our time,” Clarke not only won the highest science fiction honors, the Nebula and Hugo Awards, but also received nominations for an Academy Award and the Nobel Peace Prize, and was knighted for his services to literature (Ray Bradbury). Now, more than one hundred works of the sci-fi master’s short fiction are available in the “single-author collection of the decade” (Booklist, starred review). This definitive edition includes early work such as “Rescue Party” and “The Lion of Comarre,” classics like “The Nine Billion Names of God” and “The Sentinel” (which was the kernel of the later novel and movie, 2001: A Space Odyssey), and later works including “A Meeting with Medusa” and “The Hammer of God.” Encapsulating one of the great science fiction careers of all time, this immense volume “displays the author’s fertile imagination and irrepressible enthusiasm for both good storytelling and impeccable science” (Library Journal). “One of the most astounding imaginations ever encountered in print.” —The New York Times “As his Collected Stories helps to demonstrate, there has been no popular writer since the days of C S Lewis and Charles Williams whose disposition is more nakedly apocalyptic, who takes greater pleasure in cradling eternity in the palm of his hand.” —The Guardian

This “marvelous lunar espionage thriller” by the science fiction grandmaster and author of 2001: A Space Odyssey “packs plenty of punch” (SFReviews.net). Two hundred years after landing on the Moon, mankind has moved further out into the solar system. With permanent settlements now established on the Moon, Venus, and Mars, the inhabitants of these colonies have formed a political alliance called the Federation. On the Moon, a government agent from Earth is tracking a suspected spy at a prominent observatory. His mission is complicated by the rise in tensions between Earth’s government and the Federation over access to rare heavy metals. As the agent finds himself locked in a battle for life and death on the eerie, lunar landscape, the larger conflict explodes across space, leaving mankind’s future in doubt. First published in 1955, this suspense-filled space opera by the Science Fiction and Fantasy Hall of Fame inductee was a significant forerunner of television hits like Star Trek and The Expanse.

Short stories from the science fiction master—including the tale that inspired 2001: A Space Odyssey. These stories present a brilliant showcase of Arthur C. Clarke’s many-layered approach to the moral dilemmas of scientific advancement—from the thrilling and brutal “Breaking Strain” to the more poetic and thoughtful “Second Dawn.” Also included is “The Sentinel”—the basis for the classic Stanley Kubrick film 2001: A Space Odyssey. This outstanding collection reminds us that the author of Childhood’s End was not only a giant in the world of science fiction, a recipient of multiple Nebula and Hugo Awards, and an incomparable storyteller, but also a “skilled literary artist” (Hartford Courant). “I do not know of any short story that has moved me more than Arthur C. Clarke’s ‘If I Forget Thee, Oh Earth.’” —The Christian Science Monitor

From Arthur C. Clarke, the brilliant mind that brought us 2001: A Space Odyssey, and Stephen Baxter, one of the most cogent SF writers of his generation, comes a novel of a day, not so far in the future, when the barriers of time and distance have suddenly turned to glass. When a brilliant, driven industrialist harnesses cutting-edge physics to enable people everywhere, at trivial cost, to see one another at all times—around every corner, through every wall—the result is the sudden and complete abolition of human privacy, forever. Then the same technology proves able to look backward in time as well. The Light of Other Days is a story that will change your view of what it is to be human. At the Publisher’s request, this title is being sold without Digital Rights Management Software (DRM) applied.

A man discovers the planet’s destiny in the ocean’s depths in this near-future novel by one of the twentieth century’s greatest science fiction authors. In the very near future, humanity has fully harnessed the sea’s immense potential, employing advanced sonar technology to control and harvest untold resources for human consumption. It is a world where gigantic whale herds are tended by submariners and vast plankton farms stave off the threat of hunger. Former space engineer Walter Franklin has been assigned to a submarine patrol. Initially indifferent to his new station, if not bored by his daily routines, Walter soon becomes fascinated by the sea’s mysteries. The more he comes to understand man’s true place in nature—and the unique role he will soon play in humanity’s future. A lasting testament to Arthur C. Clarke’s prescient and powerful imagination, The Deep Range is a classic work of science fiction that remains deeply relevant to our times.
