In her surprising, entertaining and persuasive new book, award-winning author and psychologist Susan Pinker shows how face-to-face contact is crucial for learning, happiness, resilience and longevity. From birth to death, human beings are hard-wired to connect to other human beings. Face-to-face contact matters: tight bonds of friendship and love heal us, help children learn, extend our lives and make us happy. Looser in-person bonds matter, too, combining with our close relationships to form a personal "village" around us, one that exerts unique effects. And not just any social networks will do: we need the real, face-to-face, in-the-flesh encounters that tie human families, groups of friends and communities together. Marrying the findings of the new field of social neuroscience together with gripping human stories, Susan Pinker explores the impact of face-to-face contact from cradle to grave, from city to Sardinian mountain village, from classroom to workplace, from love to marriage to divorce. Her results are enlightening and enlivening, and they challenge our assumptions. Most of us have left the literal village behind, and don't want to give up our new technologies to go back there. But, as Pinker writes so compellingly, we need close social bonds and uninterrupted face-time with our friends and families in order to thrive—even to survive. Creating our own "village effect" can make us happier. It can also save our lives.

Creating our own "village effect" makes us happier. It can also save our lives. Praise for The Village Effect "The benefits of the digital age have been oversold. Or to put it another way: there is plenty of life left in face-to-face, human interaction. That is the message emerging from this entertaining book by Susan Pinker, a Canadian psychologist. Citing a wealth of research and reinforced with her own arguments, Pinker suggests we should make an effort—at work and in our private lives—to promote greater levels of personal intimacy."—Financial Times "Drawing on scores of psychological and sociological studies, [Pinker] suggests that living as our ancestors did, steeped in face-to-face contact and physical proximity, is the key to health, while loneliness is 'less an exalted existential state than a public

health risk.' That her point is fairly obvious doesn't diminish its importance; smart readers will take the book out to a park to enjoy in the company of others."—The Boston Globe "A hopeful, warm guide to living more intimately in a disconnected era."—Publishers Weekly "A terrific book . . . Pinker makes a hardheaded case for a softhearted virtue. Read this book. Then talk about it—in person!—with a friend."—Daniel H. Pink, New York Times bestselling author of Drive and To Sell Is Human "What do Sardinian men, Trader Joe's employees, and nuns have in common? Real social networks—though not the kind you'll find on Facebook or Twitter. Susan Pinker's delightful book shows why face-to-face interaction at home, school, and work makes us healthier, smarter, and more successful."—Charles Duhigg, New York Times bestselling author of The Power of Habit: Why We Do What We Do in Life and Business "Provocative and engaging . . . Pinker is a great storyteller and a thoughtful scholar. This is an important book, one that will shape how we think about the increasingly virtual world we all live in."—Paul Bloom, author of Just Babies: The Origins of Good and Evil From the Hardcover edition.

We are profoundly social creatures--more than we know. In *Social*, renowned psychologist Matthew Lieberman explores groundbreaking research in social neuroscience revealing that our need to connect with other people is even more fundamental, more basic, than our need for food or shelter. Because of this, our brain uses its spare time to learn about the social world--other people and our relation to them. It is believed that we must commit 10,000 hours to master a skill. According to Lieberman, each of us has spent 10,000 hours learning to make sense of people and groups by the time we are ten. *Social* argues that our need to reach out to and connect with others is a primary driver behind our behavior. We believe that pain and pleasure alone guide our actions. Yet, new research using fMRI--including a great deal of original research conducted by Lieberman and his UCLA lab--shows that our brains react to social pain and pleasure in much the same way as they do to physical pain and pleasure. Fortunately, the brain has evolved sophisticated mechanisms for securing our place in the social world. We have a unique ability to read other people's minds, to figure out their hopes, fears, and motivations, allowing us to effectively coordinate our lives with one another. And our most private sense of who we are is intimately linked to the important people and groups in our lives. This wiring often leads us to restrain our selfish impulses for the greater good. These mechanisms lead to behavior that might seem irrational, but is really just the result of our deep social wiring and necessary for our success as a species. Based on the latest cutting edge research, the findings in *Social* have important real-world implications. Our schools and businesses, for example, attempt to minimize social distractions. But this is exactly the wrong thing to do to encourage engagement and learning, and literally shuts down the social brain, leaving powerful neuro-cognitive resources untapped. The insights revealed in this pioneering book suggest ways to improve learning in schools, make the workplace more productive, and improve our overall well-being.

Barbara Kingsolver's acclaimed international bestseller tells the story of an American missionary family in the Congo during a poignant chapter in African history. It spins the tale of the fierce evangelical Baptist, Nathan Price, who takes his wife and four daughters on a missionary journey into the heart of darkness of the Belgian Congo in 1959. They carry with them to Africa all they believe they will need from home, but soon find that all of it - from garden seeds to the King James Bible - is calamitously transformed on African soil. Told from the perspective of the five women, this is a compelling exploration of African history, religion, family, and the many paths to redemption. The *Poisonwood Bible* was nominated for the Pulitzer Prize in 1999 and was chosen as the best reading group novel ever at the Penguin/Orange Awards. It continues to be read and adored by millions worldwide.

In the summer of 1924, the Bolshevik Party called on scholars, the police, the courts, and state officials to turn their attention to the villages of Russia. The subsequent campaign to 'face the countryside' generated a wealth of intelligence that fed into the regime's sense of alarmed conviction that the countryside was a space outside Bolshevik control. Richly rooted in archival sources, including local and central-level secret police reports, detailed cases of the local and provincial courts, government records, and newspaper reports, *Face to the Village* is a nuanced study of the everyday workings of the Russian village in the 1920s. Local-level officials emerge in Tracy McDonald's study as vital and pivotal historical actors, existing between the Party's expectations and peasant interests. McDonald's careful exposition of the relationships between the urban centre and the peasant countryside brings us closer to understanding the fateful decision to launch a frontal attack on the countryside in the fall of 1929 under the auspices of collectivization.

After four decades of eradicating gender barriers at work and in public life, why do men still dominate business, politics and the most highly paid jobs? Why do high-achieving women opt out of successful careers? Psychologist Susan Pinker explores the illuminating answers to these questions in her groundbreaking first book. In *The Sexual Paradox*, Susan Pinker takes a hard look at how fundamental sex differences continue to play out in the workplace. By comparing the lives of fragile boys and promising girls, Pinker turns several assumptions upside down: that the sexes are biologically equivalent; that smarts are all it takes to succeed; that men and women have identical goals. If most children with problems are boys, then why do many of them as adults overcome early obstacles while rafts of competent, even gifted women choose jobs that pay less or decide to opt out at pivotal moments in their careers? Weaving interviews with men and women into the most recent discoveries in psychology, neuroscience and economics, Pinker walks the reader through these minefields: Are men the more fragile sex? Which sex is the happiest at work? What does neuroscience tell us about ambition? Why do some male school drop-outs earn more than the bright, motivated girls who sat beside them in third grade? Pinker argues that men and women are not clones, and that gender discrimination is just one part of the persistent gender gap. A work world that is satisfying to us all will recognize sex differences, not ignore them or insist that we all be the same.
